THE RATIONALE BEHIND THE INTRODUCTION OF A B.A HONS **COURSE IN POLITICAL SCIENCE**

The TSCHE and Osmania University have decided to launch a B.A Hons. course in Political science. While at one time social sciences and the B.A degree did not command the same respect that courses in sciences did, today the situation is completely different. Some social science courses have been witnessing a greater demand than the science courses.

However, the demand for B.A social sciences courses has been quite low in the state of Telangana as well as in the city of Hyderabad. This lack of penetration of B.A courses has a litany of reasons behind it. The prime reason is that there has been very little innovation in the curriculum framework in the B.A social sciences courses. Very little has changed over a long period of time, and this is reflected in the second reason which is lack of upgradation in the syllabi of various social sciences courses. Another reason behind the poor patronage for these courses is the lack of a proper and dedicated faculty to teach these courses.

Yet another reason why social sciences and B.A do not have sufficient takers in the perception that these are inferior courses that do not require intelligence to pursue them. One can say that B.A and social science courses are stigmatized in a manner of speaking. Another extremely important reason is that in some cases, there is a lack of proper awareness about the potential of the social sciences, especially political science and economics to get career opportunities. In a vast majority of cases, there is a total lack of awareness about the potential of political science and economics in finding jobs.

In a paradoxical situation, there are a large number of civil service aspirants, both at the central and state level, but these very aspirants have little awareness about how the study of political science to a greater extent and the study of economics to lesser extent is now mandatory to do well and succeed in these civil service examinations.

Added to this is the structural problem of the B.A program. Presently, the B.A program requires students to opt for three subjects in a pre-set combination and this limits how much a student can learn about each of these three subjects. If one takes into consideration the change made in the pattern of the UPSC examination a few years ago, instead of one general studies paper, there are now two general studies papers. The second general studies paper requires the aspirants to have an in-depth knowledge of political theory, Indian government and politics, international relations and public policy apart from some aspects of economics as well.

The present structure limits how much of political science can be pursued as also the depth of what one learns. Given the fact that among the UPSC exams, political science occupies the most prominent place, it is an urgent requirement that a B.A Hons course be introduced by the Osmania University immediately. The introduction of an Honours course will ensure that those who seek to do well in the UPSC, and other competitive exams can be given an education in political science which is not compromised and is sufficiently deep and gives an edge to those who pursue this course.

Students pursuing the B.A Hons political science course will not only benefit in the UPSC and other competitive exams but also will be very well equipped to deal with their career by pursuing job-

oriented masters programs such as public policy (which is now all the range in many universities in the country) as well as programs in international studies which also serve as a catchment for several different types of jobs including those in various different consulates and embassies.

Jobs in rural development and governance at various levels are also available in plenty for those who are equipped with the necessary knowledge and skills and the foundation for these can be laid by the B.A Hons program in political science.

It must also be pointed out that most Honours courses at the undergraduate level are presently being offered mainly in Delhi and Kolkata and sporadically in other parts of north and east India. However, the coming of private universities, especially in the north, has increased the number of B.A Hons programs. The private universities offer them at a very high cost. In the southern part of the country, there is hardly any university, except for some newly emerging private universities, that offer Hons programs at the under graduate level. The Osmania University, with a proud history of over a hundred years, with recognition nationally and internationally, taking the lead in offering Hons programs in B.A would be yet another feather in its cap since it will be the first public university to offer these programs at a cost which is affordable by all sections of the society.

This would be in tune with the goal of the right to education and equality as envisaged in our constitution.

To sum up, it can be said that the B.A Hons program in political science will be of great help and use to students by opening doors and opportunities that most students of a regular B.A are not even aware of as of today.

SEMESTER-I

Core-I: Political Theory and Concepts

Course Objective: Political Theory is often a misunderstood phrase with quite a few people equating it with some of the concepts and even institutions that go into the making of the subject called Political Science. While it is indeed necessary to understand concepts and institutions and their functioning it should be kept in mind all the time that Political Theory deals with ideas that have emerged in different periods and how some of them have disappeared forever while others have persisted through time. This persistence is not one dimensional; it is something that shows breaks and regenerations of certain ideas while also showing continuities in the same ideas. In other instances, it is something that shows the continuous existence of an idea through time but explores how the core of the seemingly continuous idea has undergone mutation. This particular phenomenon is called “sublation” a word coined in the English language to express what the German term “aufheben” conveyed. What needs to be understood in the very first semester is that Political Theory generates political ideas and these drive politics. From Political Theory to politics is the Greek “praxis” which sought to emphasize the coming together of theory and practice. This paper explores those important concepts and theories that have been adopted by the world and it tries to explain how these theories and concepts have come into existence. Historicity pervades through the discussion on the elements of this paper.

Core-III: Public Administration Theories and Concepts

Course Objectives: Public Administration as a rubric has been a part of mainstream Political Science despite its origins being in the world of industry especially those that had a production line. There was a division of employees into line and staff and the word public was essentially used to denote the line workers who were daily wage employees. This idea of public administration and that of the public did not stand scrutiny of time and the formation of unions of workers led to the politicization of the concept of Public Administration. Slowly, the involvement of governments in the settling of disputes brought it firmly into the domain of politics. This was the beginning of public administration being studied as a part of Political Science in various Universities first in Europe and later in American Universities as well. This inclusion of Public Administration in Political Science led to the transformation of Political Science into a policy science. In the present period in some universities Public Administration and Public Policy are studied as a part of the departments of management. However, Public Administration and later Public Policy are primarily considered to be an integral part of Public Administration. The study of this course will enable students to not only understand the political aspects of the administrative process especially the functioning of the bureaucracy.

The students will also derive an understating of not just of political aspects but also of concerns of management studies and this opens new vistas in the minds of students in understanding the functioning of institutions which are a political interface between the public and administrators.

Core-VII: Modern Political Analysis

Course Background: While there has always been a Political Theory or Political Philosophy which was the touchstone for understanding politics, the Positivist and Empiricist revolutions brought about new ways of looking at the world and also at politics. Of the two it is Empiricism that has generated many different changes in the perspectives of how to understand politics. One of the significant changes is the study of politics logically and scientifically while a more fundamental change has been the movement away from theories that were considered normative and therefore studying the main subject of politics in the modern era – the individual. While this produced some results it was felt that studying the individual in the context of institutions would yield better and more certain results. While there have been failures there has been an attempt to understand the causes behind the failures and rectify them to yield better results. This paper studies those trends and tries to generate an understanding of the purpose behind these studies.

GE-I: Social Structure of Indian Society

Back Ground: Sociology along with psychology is one of the new disciplines that constitute the social sciences. The Gulbenkian committee report submitted under the chairmanship of Immanuel Wallerstein made a case for the widening after scope of social sciences and including inter disciplinary education in the new expanded courses that should be launched by Universities all over the world. The substance of the argument of the committee is that there is a tendency to create a hierarchy among the social sciences and that this should be overcome and through the introduction of recently developed disciplines a more comprehensive and well-rounded education should be provided starting from under graduate courses itself. Special mention was made of sociology, anthropology in its myriad forms and psychology and even psychiatry as a social science had to be made so that there are no loopholes in social science education.

Course Objective: Keeping these recommendations in view the BA (Honours) course in political science has been developed in a completely interdisciplinary manner and it is here that sociological dimensions of the discipline of sociology and the structures of society in India which impinge on the political realm of activity has been included for study by the students. The main aim of this particular course is to introduce young students to the complexity of the traditional Indian society. In the mayhem of everyday life many young people do not have a proper historical understanding of how social institutions and practices privilege some, while disadvantaging others and they are unaware of the duration of time these discriminatory structures and practices have persisted. This course will mainly sensitize those who have not been socialized in understanding the humiliation and the discrimination that a large number of Indian people face on a daily basis. To summarize it is about the exclusion of populations from social goods at a time when theories of inclusion are talked about as banalities.

AECC-II:Environmental Studies

The last few decades of the 20th Century and the beginning of the 21st Century have shown a great concern towards the degradation of the Environment. It started as issues such as the hole in the Ozone layer and the banning of chlorofluorocarbons. Vehicular pollution, industrial pollution and all other forms of pollution have been seen as leading to diseases among children and older people. Apart from this the other big concern has been the Green House effect and Global Warming and their deleterious effects. In the light of these events this paper tries to look at the present and the future from the point of view of a cleaner and greener environment

Semester-III

Core-VIII: Western Political Thought – I

This paper deals with the Western Political Thought of the Ancient Period of Europe, some parts of Medieval European Thinking and Beginnings of the Political Thought in the Modern period of European history. It is often mistakenly believed that Political Thought is a pervading phenomenon through the Ancient period of European history to the Modern period and through the Modern and Post-Modern periods. This paper tries to demonstrate that Political Thought is actually a peculiarly Greek phenomenon since the organisation of Ancient Greek society was based in the institution called the Polis. The Roman Period that followed the Greek period created translations of Greek Political vocabulary into Latin and hence the word Political disappears from the vocabulary of the Roman period and the Medieval period of European history. This paper studies this phenomenon and also the reappearance of the word Political in the Modern Period despite the absence of the Polis. It looks into the reasons why and how the word was reintroduced in conjunction with Philosophy or Theory.

DSC-I (A): Political Ideologies

A caveat must be put right in the beginning of writing the rationale for this course. Ideology is a very deep and complicated subject in itself and there are many technical definitions attributed to the term which makes its understanding a very difficult exercise. Therefore it is being mentioned right in the beginning that this course steers clear of those difficult and contentious definitions and focusses on Ideology as the vantage point from which one views politics. This is a perfectly rational and legal understanding and the following of it generates many isms, all of which cannot be studied here. The focus is therefore on those isms which enrich the understanding of everyone about various issues that the study of politics throws up.

Core- XV: Public Policy Analysis

Course Description

Public policy making constitutes the core of politics and governance in any country. As the governments are called upon to perform a wide array of functions, the policy making process has acquired considerable complexity. Although policy analysis finds an important place in other social science disciplines, it has evolved into a major sub-discipline in political science since the 1950s. As such it became a basic component of political science curricula all over the world.

Learning Outcomes

This course aims at familiarizing the students with the key concepts and theories of public policy. At the end of the course, students are expected to understand as to why certain issues emerge as policy issues for the government to act upon, what the theories are, how different actors play their role in shaping and influencing the policy process, how policies are implemented and what are the outcomes. The subject matter will be treated in a broader perspective and in the light of different approaches in public policy making and analysis.

Semester-VI

Core-XVII: Indian Political Thought and Movements

This paper seeks to acquaint students with political thought in India. It should be remembered that Political Thought in India is in reality limited to the modern period and that too to a handful of thinkers who had something original to say. The others just rehashed Western ideas of Socialism in their own different ways and these at best were pamphleteers and politicians. Ancient Indian Political Thought is complete misnomer which is best avoided as there was no Polis or its equivalent institution in Ancient India. The same applies for the State too. The State is a Modern Institution which was totally absent in the Ancient and Medieval periods in any part of the world including Europe. What is studied as Ancient India is only for historical curiosity and to see the gradual transformation of this Ancient Nation into a Modern Nation-State with politics as they are understood coming into being towards the end of the 19th Century and the beginning of the 20th Century. Despite claims to the contrary, India as a Political Nation emerged only in the 20th Century and most unfortunately got fragmented into three parts. This paper will study the contribution of various people to the emergence of a political nation and subsequently as a Nation-State.
