Title : Probability

Faculty : Surekha

Synopsis :

Probability is the branch of Mathematics that tells the occurrence of an event. In our real life, we can see several situations where we can predict the outcomes of events in statistics. These outcomes may be specific or uncertain to occur. The formula of probability is the ratio of favourable events to the total number of events in an experiment.

The uncertainty of the event gives the probability of the event. The real-life applications of probability are many in various fields like medicines, business, and other industries also.
