Department of Botany

Department of Botany in collaboration with Eco club has conducted a seminar on “Biodiversity and its Conservation”. Dr. K. Thulasi Rao, an eminent environmentalist has been invited as the resource person. He explained that Biodiversity is the variation among living organisms from different sources including terrestrial, marine and desert ecosystems. It includes the number of different organisms and their relative frequencies in an ecosystem. It also reflects the organization of organisms at different levels. It provides us with nourishment, housing, fuel, clothing and several other resources. It also extracts monetary benefits through tourism. Therefore, it is very important to have a good knowledge of biodiversity for a sustainable livelihood.

He explained that Biodiversity and its maintenance are very important for sustaining life on earth and also that every species has its own vital role to play in the ecosystem. A diverse ecosystem is more productive and can withstand environmental stress.

He emphasized that India is one of the most diverse nations in the world. It ranks ninth in terms of plant species richness. It is the origin of important crop species such as pigeon pea, cucumber, cotton and sesame. India is also a centre of various domesticated species such as millets, cereals, legumes, vegetables, medicinal and aromatic crops.

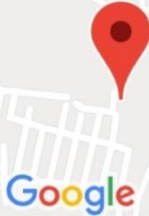

The seminar was very informative and useful to all the students and participants. Students learned that all the species have a right to exist. Humans should not cause their voluntary extinction. Biodiversity preserves different cultures and spiritual heritage. Therefore, it is very important to conserve biodiversity.
