

Date: 18/4/22

We department of Chemistry along with III BZC students visited various water plants in wanaparthy town. From this field visit students gain knowledge how to purify water and how they maintain pH and TDS (total dissolved solids), and students understand what the range pH/TDS better for our lives, if the TDS increases or decreases what will happen in our lives.

Most of the water plants did not maintain pH, conductivity and TDS. due to this in future health issues arise.

Field Visit

Chemistry students and faculty members have collected water from various water plants in wanaparthy town and evaluated the quality of water (i.e,  $\text{pH}$ , TDS @ Conductivity)
