## STUDENT STUDY PROJECT

(2021-2022)

## SUBJECT

## TITLE: A Scientific Investigation of Lifestyle Patterns and some Health Parameters of certain stakeholders from Government Degree College, Shadnagar, Ranga Reddy district employing Empirical and Survey Methods.

## Student Participants:

| 1. K. Shireesha | B.Sc(BZC) III Yr | 16. | M. Mahesh | B. $\operatorname{Sc}(\mathrm{BZC})$ III Yr |
| :--- | :--- | :--- | :--- | :--- |
| 2. | S. Swathi | B.Sc(BZC) III Yr | 17. | M. Aparna |
| B. $\mathrm{Sc}(\mathrm{BZC})$ III Yr |  |  |  |  |
| 3. | B. Sheelu | B.Sc(BZS) II Yr | 18. | M. Navaneetha B.Sc(BZC) III Yr |
| 4. G. Manasa | B.Sc(BZC) II Yr | 19. | P. Anusha | B.Sc(BZC) III Yr |
| 5. | B. Shravani | B.Sc(BZC) II Yr | 20. | B. Yamini |
| B.Sc(BZC) IYr |  |  |  |  |
| 6. K. Supriya | B.Sc(BZC) II Yr | 21. | D. Swapna | B.Sc(BZC) I Yr |
| 7. N. Sindhuja | B.Sc(BZC) III Yr | 22. | K. Gayathri | B.Sc(BZC) I Yr |
| 8. U.Balakrishna B.Sc(BZC) III Yr | 23. | K. Sandhya Rani B.Sc(BZC) I Yr |  |  |
| 9. Ashwini | B.Sc(BZC) III Yr | 24. | K. Jahnavi | B.Sc(BZC) I Yr |
| 10. B. Akhila | B.Sc(BZC) III Yr | 25. | M. Babu | B.Sc(BZC) I Yr |
| 11. G. Premalatha B.Sc(BZC) III Yr | 26. | P. Mamatha | B.Sc(BZC) III Yr |  |
| 12. K. Anitha | B.Sc(BZC) III Yr | 27. | Y. Neeraja | B.Sc(BZC) III Yr |
| 13. K. Mamatha | B.Sc(BZC) III Yr | 28. | K. Vamshikrishna B.Sc(BZC) II Yr |  |
| 14. K. Mounika | B.Sc(BZC) III Yr | 29. | D. Mahipal | B.Sc(BZC) II Yr |
| 15. K. Divya | B.Sc(BZC) IIIYr | 30. | P. Ravinder | B.Sc(BZC) II Yr |

## MENTOR

: Dr N RAJKUMAR, m.Sc.,Ph.D.,ADBI, SET
Asst. Prof. of Zoology

## DECLARATION

We hereby declare that the Jignasa - Students Study Project entitled "A Scientific Investigation of Lifestyle Patterns and some Health Parameters of certain stakeholders from Government Degree College, Shadnagar, Ranga Reddy district employing Empirical and Survey Methods" is submitted by us in original project work and it has been carried out under the supervision and guidance of Dr. N. Rajkumar, Asst. Prof. of Zoology, Government Degree College, Shadnagar.

| 1. K. Shireesha | B. $\operatorname{Sc}(\mathrm{BZC})$ III Yr | 16. | M. Mahesh | B. $\operatorname{Sc}(\mathrm{BZC})$ III Yr |
| :--- | :--- | :--- | :--- | :--- |
| 2. S. Swathi | B.Sc(BZC) III Yr | 17. | M. Aparna | B. $\operatorname{Sc}(\mathrm{BZC})$ III Yr |
| 3. B. Sheelu | B.Sc(BZS) II Yr | 18. | M. Navaneetha B.Sc(BZC) III Yr |  |
| 4. G. Manasa | B.Sc(BZC) II Yr | 19. | P. Anusha | B.Sc(BZC) III Yr |
| 5. B. Shravani | B.Sc(BZC) II Yr | 20. | B. Yamini | B.Sc(BZC) IYr |
| 6. K. Supriya | B.Sc(BZC) II Yr | 21. | D. Swapna | B.Sc(BZC) I Yr |
| 7. N. Sindhuja | B.Sc(BZC) III Yr | 22. | K. Gayathri | B.Sc(BZC) I Yr |
| 8. U.Balakrishna B.Sc(BZC) III Yr | 23. | K. Sandhya Rani B.Sc(BZC) I Yr |  |  |
| 9. Ashwini | B.Sc(BZC) III Yr | 24. | K. Jahnavi | B.Sc(BZC) I Yr |
| 10. B. Akhila | B.Sc(BZC) III Yr | 25. | M. Babu | B.Sc(BZC) I Yr |
| 11. G. Premalatha B.Sc(BZC) III Yr | 26. | P. Mamatha | B.Sc(BZC) III Yr |  |
| 12. K. Anitha | B.Sc(BZC) III Yr | 27. | Y. Neeraja | B.Sc(BZC) III Yr |
| 13. K. Mamatha | B.Sc(BZC) III Yr | 28. | K. Vamshikrishna B.Sc(BZC) II Yr |  |
| 14. K. Mounika | B.Sc(BZC) III Yr | 29. | D. Mahipal | B.Sc(BZC) II Yr |
| 15. K. Divya | B.Sc(BZC) IIIYr | 30. | P. Ravinder | B.Sc(BZC) II Yr |

## Place: Shadnagar

## ACKNOWLEDGEMENTS

We would like to express our sincere thanks to Dr. N. Rajkumar, Asst. prof. of Zoology for his vital support, guidance and encouragement, without which, this project would not have comeforth. We would also express our sincere thanks to Sri G. Bhanu Prakash, Principal (FAC) of this college for his encouragement and blessings. We take this opportunity to thank other Staff Members and Students for extending their cooperation and best wishes in accomplishing this Student Study Project.

## CERTIFICATE

This is to certify that the Jignasa - Student Study Project entitled "A Scientific Investigation of Lifestyle Patterns and some Health Parameters of certain stakeholders from Government Degree College, Shadnagar, Ranga Reddy district employing Empirical and Survey Methods" submitted is a bonafide Project done by the following set of students:

| 1. K. Shireesha | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{III} \mathrm{Yr}$ | 16. | M. Mahesh | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{III} \mathrm{Yr}$ |
| :---: | :---: | :---: | :---: | :---: |
| 2. S. Swathi | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{III} \mathrm{Yr}$ | 17. | M. Aparna | B. Sc(BZC) III Yr |
| 3. B. Sheelu | B. $\mathrm{Sc}(\mathrm{BZS})$ II Yr | 18. | M. Navaneetha B.Sc(BZC) III Yr |  |
| 4. G. Manasa | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{II} \mathrm{Yr}$ | 19. | P. Anusha | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{III} \mathrm{Yr}$ |
| 5. B. Shravani | B. $\mathrm{Sc}(\mathrm{BZC})$ II Yr | 20. | B. Yamini | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{IYr}$ |
| 6. K. Supriya | B. $\mathrm{Sc}(\mathrm{BZC})$ II Yr | 21. | D. Swapna | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{I} \mathrm{Yr}$ |
| 7. N. Sindhuja | B. $\mathrm{Sc}(\mathrm{BZC}$ ) III Yr | 22. | K. Gayathri | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{I} \mathrm{Yr}$ |
| 8. U.Balakr | B. $\mathrm{Sc}(\mathrm{BZC})$ III Yr | 23. | K. Sandhy | ani B.Sc(BZC) I Yr |
| 9. Ashwini | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{III} \mathrm{Yr}$ | 24. | K. Jahnavi | B. Sc(BZC) I Yr |
| 10. B. Akhila | B. Sc(BZC) III Yr | 25. | M. Babu | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{I} \mathrm{Yr}$ |
| 11. G. Premalath | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{III} \mathrm{Yr}$ | 26. | P. Mamatha | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{III} \mathrm{Yr}$ |
| 12. K. Anitha | B. Sc(BZC) III Yr | 27. | Y. Neeraja | B. Sc(BZC) III Yr |
| 13. K. Mamatha | B. Sc(BZC) III Yr | 28. | K. Vamshikrishna B.Sc(BZC) II Yr |  |
| 14. K. Mounika | B. Sc(BZC) III Yr | 29. | D. Mahipal | B. $\mathrm{Sc}(\mathrm{BZC}) \mathrm{II} \mathrm{Yr}$ |

## INTRODUCTION

Title

> "A Scientific Investigation of Lifestyle Patterns and some Health Parameters of certain stakeholders from Government Degree College, Shadnagar, Ranga Reddy district employing Empirical and Survey Methods".

Hypothesis : To test whether the subjects under study are healthy or unhealthy.

## Aims :

1. To assess the risks associated with lifestyle based Noncommunicable diseases.
2. To evaluate certain general health parameters, such as Temperature, Pulse, Haemoglobin percentage, Weight, Height, Body Mass Index and Blood group typing.

## Objectives :

1. To measure the risks associated with lifestyle-based Noncommunicable diseases like
i) Blood pressure
ii) Random blood glucose levels
iii) Lipid profile including Cholesterol, Triglycerides, HDLs and LDLs.
2. To collect primary data relating to lifestyle patterns of Undergraduate students, Teaching and Non-teaching Staff using Questionnaire method.
3. To make suggestions and recommendations to reduce the risks of lifestyle patterns that lead to Noncommunicable diseases and premature deaths.

The body mass index (BMI) is the metric currently in use for defining anthropometric height/weight characteristics in adults and for classifying (categorizing) them into groups. The common interpretation is that it represents an index of an individual's fatness. It also is widely used as a risk factor for the development of or the prevalence of several health issues. In addition, it is widely used in determining public health policies. The BMI has been useful in population-based studies by virtue of its wide acceptance in defining specific categories of body mass as a health issue.

BMI is used as an indicator of the relative healthiness of a person. The Centre for Disease Control (CDC) and the World Health Organization (WHO) recognize that people who are overweight or underweight are at higher risk for certain health conditions. BMI also enables health professionals to discuss bodyweight objectively with their patients.

Body mass index (BMI) is a measure of body fat based on height and weight. It is a useful indicator of underweight, healthy weight, overweight or obese of the subject under investigation. It is a good gauge of one's risk for diseases that can occur with more body fat.

It was initially developed by Lambert Adolphe Jacques Quetelet, a Belgian astronomer, mathematician, statistician and sociologist. He called it as "social physics" (1830-1850). BMI is also known as Quetelet Index. Ancel Keys, an American scientist in the area of diet and health, has introduced the term "Body Mass Index" in his paper published in 'Journal of chronic diseases’ in July 1972. In France, Israel, Italy and Spain, legislation has been introduced banning usage of fashion show models having a BMI below 18. This is done in order to fight anorexia (an emotional disorder characterized by an obsessive desire to lose weight by refusing to eat) among models and people interested in fashion.

Blood glucose monitoring observes for patterns in the fluctuation of blood glucose (sugar) levels that occur in response to diet, exercise, medications, and or pathological processes associated with blood glucose fluctuations such as diabetes. Unusually high or low blood glucose levels can potentially lead to acute and or chronic, life-threatening conditions.

Knowledge of the predisposing risk factors is vital in the modification of lifestyle behaviors conducive to optimal cardiovascular health. Measuring and appropriately disseminating knowledge of the modifiable risk factors at an early age is an essential preventive educational approach. Strategies to achieve even a modest lowering of the levels of blood pressure in the population of children and young adults are therefore important public health goals.

A normal resting heart rate for adults ranges from 60 to 100 beats per minute. Generally, a lower heart rate at rest implies more efficient heart function and better cardiovascular fitness. For example, a well-trained athlete might have a normal resting heart rate closer to 40 beats per minute.

Carrillo-Larco et al. reviewed around 200 previous studies from across Latin America and the Caribbean. This revealed that, since 2005, low HDL cholesterol has been the most common type of dyslipidaemia in this region, followed by elevated triglycerides, and third, high LDL cholesterol. These patterns have changed little over the years.

## RESEARCH METHODOLOGY:

## Sample size: 60 (UG students = 46; Teaching \& Non-teaching Staff=14)

## Methodology:

## 1. Experimental method

## 2. Questionnaire method/ Survey method

## Parameters studied

1. Body weight
2. Body height
3. Body Mass Index
4. Blood typing
5. Temperature
6. Blood pressure
7. Pulse
8. $\mathrm{Hb} \%$ 5000
9. Random Blood Glucose levels
10. Lipid profile
11. Lipid profile
12. Lifestyle pattern

## Instruments / Method adopted

Weighing machine (KRUPS)
Measuring tape
Online BMI calculator
Blood group Test Kit (Sera A, B \& D)
Clinical Thermometer (SMIC Gold)
Omron BP monitoring machine
Omron BP monitoring machine
Fully Automated Hematology Analyzer BC-

Accu-Chek Active Glucometer
CHOD-PAP Methodology (Cholesterol)
GPO-TOPS Methodology (Triglycerides)
Questionnaire method (15 Questions)

Students measuring Height in cm of the Subjects under study using Measuring Tape

Student measuring Weight in Kg using Weighing Machine of the Subjects

Students measuring Random Blood
Glucose using Glucometer

Technician from Local Diagnostic Centre drawing blood sample from students for haematological parameters

Technician from Local Diagnostic Centre drawing blood sample for hematological parameters

Students measuring Height in cm of the Staff using Measuring Tape

Students measuring Blood Pressure \& Pulse of the Staff using Automatic BP Monitoring Machine

## RESULTS AND DISCUSSION

Table \# 1: Empirical Data (BMI \& Other Haematological parameters) of UG Students

| S.No | Name of the Student | Prog ram/ Year | Age | $\begin{aligned} & \text { Wt } \\ & \text { in } \\ & \text { Kg } \\ & \hline \end{aligned}$ | $\begin{gathered} \mathrm{Ht} \\ \text { in } \\ \mathrm{Cm} \\ \hline \end{gathered}$ | BMI | Random <br> Blood Glucose in mg/DL | BP in mm Hg | Temp. in degree Celsius | Pulse | Blood group |

## Discussion:

It is clear from the empirical data collected from the undergraduate students of this college with a sample size of 46 that the students were in the age group of 17 to 21 years (Table \#1). Similarly, the range of body weights of the students varied from 30 kg to 74 kg . Likewise, the range of heights of the students differs from as low as 135 cm to as high as 179 cm . From the analysis of the collected data, it is obvious that the Body Mass Indices of the students showed a minimum value of 13.41 and maximum value of 27.18.

Table \#2: BMI FINDINGS OF UG STUDENTS IN PERCENTAGE

| S.No. | Category | Percentage | Remarks |
| :---: | :--- | :---: | :--- |
| 1 | Underweight | $37 \%$ | Students |
| 2 | Severely Underweight | $28 \%$ |  |
| 3 | Normal | $31 \%$ |  |
| 4 | Overweight | $\mathbf{4 \%}$ |  |

Figure \#1: Pie Chart showing BMI Findings of select UG Students in Percentage

## BMI FINDINGS OF UG STUDENTS

| - Underweight | $■$ Severely Underweight |
| :--- | :--- |
| - Normal | $■$ Overweight |

It is obvious from the BMI Findings as shown in table \#2 and corresponding pie chart (Figure\#1) that the 37\% of the students are categorized in underweight category, $28 \%$ under severely underweight category, $31 \%$ under normal category while $4 \%$ were overweight.

The random blood sugar results of the select UG students showed a minimum value of $48 \mathrm{mg} / \mathrm{dL}$ and a maximum value of $183 \mathrm{mg} / \mathrm{dL}$. The normal value of random blood sugar level is less than 200 mg per decilitre. From these findings it is clear that none of the students were in diabetic range.

The analysis of blood pressure readings of students (Table\#3) indicated that $80 \%$ of the students showed normal blood pressure values, $17 \%$ of the them were included under Prehypertension category while $3 \%$ of them were falling under Hypertension Stage1 (Figure\#2).

## Table \#3: BLOOD PRESSURE FINDINGS OF SELECT UG STUDENTS IN PERCENTAGE

| BP Category | No. of <br> Subjects <br> (Students) | Percentage |
| :--- | :---: | :---: |
| Normal | 37 | $80 \%$ |
| Prehypertension | 8 | $17 \%$ |
| Stage 1 <br> Hypertension | 1 | $3 \%$ |
| Stage 2 <br> Hypertension | 0 | $0 \%$ |

| Blood Pressure <br> Category | Systolic <br> $\mathbf{m m ~ H g}$ (upper \#) | Less than 120 | AND |
| :---: | :---: | :---: | :---: |
| Normal | $120-139$ | Diastolic |  |
| mm Hg (lower \#) |  |  |  |

Figure \#2: Pie Chart showing Blood Pressure Status of select UG Students in Percentage

The results indicated that all the students' temperature was equal to or less than normal body temperature. None of them were febrile.

Table \#4: PULSE FINDINGS OF SELECT UG STUDENTS IN PERCENTAGE

| Pulse Category | No. of Subjects | Percentage |
| :--- | :---: | :---: |
| Low | 1 | $3 \%$ |
| Normal | 31 | $67 \%$ |
| High | 14 | $30 \%$ |

Figure \#3: Pie Chart showing Pulse Categories of select UG Students in Percentage

Similarly, the pulse readings of students (Table\# 4) understudy indicated that $67 \%$ of them showed normal pulse rate, $30 \%$ of the exhibited higher pulse rate while only 3\% showed lower pulse rate (Figure\# 3).

| Blood Group | No. of Subjects <br> (Students) | Percentage |
| :--- | :---: | :---: |
| A+ | 9 | $20 \%$ |
| B+ | 13 | $28 \%$ |
| $A B+$ | 0 | $0 \%$ |
| O+ | 24 | $52 \%$ |

Figure \# 4: Pie Chart showing Blood Group Analysis of select UG Students in Percentage

Likewise, the analysis of blood group data of the students (Table \# 5) exhibited $52 \%$ of them were of O positive, $28 \%$ of them were of B positive, while $20 \%$ of them were of A positive and none of them showed AB positive or negative blood group (Figure \# 4).

Table \# 6: Empirical Data (BMI \& Other Haematological parameters) of Staff

| $\begin{aligned} & \mathbf{S} . \\ & \mathbf{N} \\ & \mathbf{o} \\ & \hline \end{aligned}$ | Name of the Staff | Subject | Age | Wt <br> in <br> Kg | $\begin{gathered} \mathrm{Ht} \\ \text { in } \\ \mathrm{Cm} \\ \hline \end{gathered}$ | BMI | Random <br> Blood <br> Glucose in mg/DL | $\begin{gathered} \text { BP in } \\ \text { mm Hg } \\ \hline \end{gathered}$ | Temperature in degree Celsius | Pulse | Blood group |

| 12 | Dr. S. Ravinder Reddy | Economics | 48 | 81 | 176 | 26.1 | 110 | 151/96 | 36.4 | 88 | AB+ |
| 13 | P. Swaroopa | TSKC <br> Mentor | 29 | 67 | 149 | 30.1 | 123 | 127/79 | 36 | 95 | AB+ |
| 14 | Ramanjaneyulu | OS | 36 | 95 | 166 | 34.5 | 113 | 120/80 | 36 | 80 | B+ |
| 15 | K. Prathap Rao | Jr. Asst. | 56 | 35 | 164 | 13 | 110 | 125/84 | 37 | 81 | O+ |

It is clear from the empirical data collected from the teaching and nonteaching staff of this college (Table \# 6) with a sample size of 15 that the staff were in the age group of 26 to 56 years. Similarly, the range of body weights of the staff varies from 35 kg to 95 kg . Likewise, the range of heights of the staff differs from as low as 149 cm to as high as 185 cm . From the analysis of the collected data, it is obvious that the Body Mass Indices of the staff showed a minimum value of 13 and maximum value of 35 .

Table \# 7: BMI FINDINGS OF STAFF IN PERCENTAGE

| S.No. | Category | Percentage | Remarks |
| :---: | :--- | :---: | :--- |
| 1 | Underweight | $0 \%$ | Staff |
| 2 | Severely |  |  |
| 3 | Underweight | $6 \%$ |  |
| 4 | Overwal | $27 \%$ |  |
| 5 | Moderately Obese | $40 \%$ |  |

Figure \# 5: Pie Chart showing BMI Findings of Staff in Percentage

It is obvious from the BMI Findings as shown in table \# 7 and corresponding pie chart (Figure \# 5) that the $40 \%$ of the staff were categorized in overweight category, $27 \%$ under moderately obese category, $27 \%$ under normal category while $6 \%$ were severely underweight.

The random blood sugar results of the staff showed a minimum value of $70 \mathrm{mg} / \mathrm{dL}$ and a maximum value of $136 \mathrm{mg} / \mathrm{dL}$. The normal value of random blood sugar level is less than 200 mg per decilitre. From these findings it is clear that none of the staff members were in diabetic range.

| BP Category | No. of <br> Subjects <br> (Staff) | Percentage |
| :--- | :---: | :---: |
| Normal | 9 | $60 \%$ |
| Prehypertension | 3 | $20 \%$ |
| Stage 1 <br> Hypertension | 2 | $13 \%$ |
| Stage 2 <br> Hypertension | 1 | $7 \%$ |

Figure \# 6: Pie Chart showing Blood Pressure Status of Staff in Percentage

## BLOOD PRESSURE CATEGORIES OF STAFF

- Normal - Prehypertension
- Stage 1 Hypertension - Stage 2 Hypertension

The analysis of blood pressure readings of staff (Table \# 8) indicated that $60 \%$ of the staff showed normal blood pressure values, $20 \%$ of the them were included under Prehypertension category, $13 \%$ of them were falling under Hypertension Stage1 while 7\% exhibited Stage 2 Hypertension (Figure \# 6).

The results indicated that the temperature of all the staff members was equal to or less than normal body temperature. None of them were febrile.

## Table \# 9: PULSE FINDINGS OF STAFF IN PERCENTAGE

| Pulse Category | No. of Subjects <br> (Staff) | Percentage |
| :--- | :---: | :---: |
| Low | 1 | $7 \%$ |
| Normal | 14 | $93 \%$ |
| High | 0 | $0 \%$ |

Figure \# 7: Pie Chart showing Pulse Categories of Staff in Percentage

## PULSE CATEGORIES OF STAFF IN PERCENTAGE

```
■ Low ■ Normal ■ High
```

Similarly, the pulse readings of staff (Table \# 9) understudy indicated that $93 \%$ of them showed normal pulse rate, $7 \%$ of them exhibited lower pulse rate while none of them showed higher pulse rate (Figure \# 7).

## Table \# 10: BLOOD GROUP FINDINGS OF STAFF IN PERCENTAGE

| Blood Group | No. of Subjects <br> (Staff) | Percentage |
| :--- | :---: | :---: |
| $A+$ | 3 | $20 \%$ |
| $B+$ | 6 | $40 \%$ |
| $A B+$ | 3 | $20 \%$ |
| O+ | 3 | $20 \%$ |

## BLOOD GROUP ANALYSIS OF STAFF

- $\mathrm{A}+\quad \mathrm{B}+\quad \mathrm{AB}+\quad \mathrm{O}^{+}$

Likewise, the analysis of blood group data of the staff (Table \# 10) exhibited $40 \%$ of them were of B positive while A positive, AB positive and O positive blood groups were $20 \%$ each (Figure \# 8).

[^0] to $200 \mathrm{mg} / \mathrm{dL}$.

Similarly, $96 \%$ of the students showed normal values of Triglycerides while $4 \%$ of them showed higher values. The normal reference value of Triglycerides is less than $150 \mathrm{mg} / \mathrm{dL}$. None of them showed lower levels of Triglycerides.

High Density Lipoprotein Cholesterol (HDL-C) is known as good cholesterol which should be equal to $40 \mathrm{mg} / \mathrm{dL}$ or higher. The analysisof the data indicated that all male students showed normal values of HDL-C while $80 \%$ of female students exhibited lower levels of HDL-C, $20 \%$ of them were in the normal range. Interestingly, none of them showed higher values of HDL-C which is a desired condition.

Low Density Lipoprotein Cholesterol (LDL-C) is known as bad cholesterol which should be less than $100 \mathrm{mg} / \mathrm{dL}$. The analysis of the data indicated that $89 \%$ of the students showed normal values while $11 \%$ of the students exhibited higher levels of LDL-C. Interestingly, none of them showed lower values of LDL-C.

Very Low Density Lipoprotein Cholesterol (VLDL-C) is also a type of bad cholesterol which should be in the normal range of 2 to 30 $\mathrm{mg} / \mathrm{dL}$. The analysis of the data indicated that $96 \%$ of the students showed normal values while $4 \%$ of the students exhibited higher levels of VLDL-C. Interestingly, none of them showed lower values of VLDL-C.

The analysis of haemoglobin percentages of students indicated that $69 \%$ of the male students were in normal range, $19 \%$ of them were in the lower range i.e., anaemic while $12 \%$ of them were in the higher range. Similarly, $63 \%$ of the female students were anaemic i.e., in the lower range while $37 \%$ of them were in normal range(Figure \# 10).

Table \# 13: Empirical Data (Lipid profile \& Hb \%) of Staff

The lipid profile analysis of the staff are exhibited in Table \#14. Regarding Total Cholesterol, $93 \%$ of them showed normal values while 7
\% indicated higher values (Figure \#11). The normal reference value of Total Cholesterol is 125 to $200 \mathrm{mg} / \mathrm{dL}$.

Similarly, $80 \%$ of the staff showed normal values of Triglycerides while $20 \%$ of them showed higher values. The normal reference value of Triglycerides is less than $150 \mathrm{mg} / \mathrm{dL}$. None of them showed lower levels of Triglycerides.

High Density Lipoprotein Cholesterol (HDL-C) is known as good cholesterol which should be equal to $40 \mathrm{mg} / \mathrm{dL}$ or higher. The analysis of the data indicated that all male staff showed normal values of HDL-C while all female staff exhibited lower levels of HDL-C. Interestingly, none of them showed higher values of HDL-C which is a desired condition.

Low Density Lipoprotein Cholesterol (LDL-C) is known as bad cholesterol which should be less than $100 \mathrm{mg} / \mathrm{dL}$. The analysis of the data indicated that $87 \%$ of the staff showed optimal values while $13 \%$ of the staff exhibited near optimal levels of LDL-C. Interestingly, none of them showed lower or higher range of values.

Very Low-Density Lipoprotein Cholesterol (VLDL-C) is also a type of bad cholesterol which should be in the normal range of 2 to 30 $\mathrm{mg} / \mathrm{dL}$. The analysis of the data indicated that $67 \%$ of the staff showed normal values, $27 \%$ of the staff exhibited higher levels of VLDL-C while $6 \%$ of them showed borderline high. Interestingly, none of them showed lower values of VLDL-C.

Figure \#12: Pie Chart showing Haemoglobin Status of Staff in Percentage

The analysis of haemoglobin percentages of staff indicated that $78 \%$ of the male staff were in normal range, $22 \%$ of them were in the lower range i.e., anaemic. Similarly, $50 \%$ of the female staff were anaemic i.e., in the lower range while $33 \%$ of them were in normal range while $17 \%$ of them were in the higher range (Figure \# 12).

## CONCLUSIONS AND RECOMMENDATIONS

1. About $37 \%$ of the students were underweight, $28 \%$ were severely underweight, $31 \%$ were normal category while $4 \%$ were overweight
2. None of the students were in diabetic range.
3. Around $80 \%$ of the students showed normal blood pressure values, $17 \%$ of the them belong to Prehypertension category while $3 \%$ of them were falling under Hypertension Stage1.
4. About $67 \%$ of the students showed normal pulse rate, $30 \%$ of them exhibited higher pulse rate while only $3 \%$ showed lower pulse rate
5. About $52 \%$ of the students were O positive, $28 \%$ of them were B positive, while $20 \%$ of them were A positive and none of them showed AB blood group.
6. About $40 \%$ of the staff were overweight, $27 \%$ were moderately obese, $27 \%$ were normal while $6 \%$ were severely underweight.
7. None of the staff members were in diabetic range.
8. About $60 \%$ of the staff showed normal blood pressure values, $20 \%$ of the them showed Prehypertension, $13 \%$ of them showed Hypertension Stage1 while 7\% exhibited Stage 2 Hypertension.
9. None of the staff members were febrile.
10. About $93 \%$ of the staff showed normal pulse rate, $7 \%$ of them exhibited lower pulse rate while none of them showed higher pulse rate.
11. The staff with B positive were $40 \%$, while A positive, AB positive and O positive blood groups were $20 \%$ each.
12. The normal total cholesterol values were shown by $70 \%$ of the students, $28 \%$ displayed lower values while $2 \%$ indicated higher values.
13. About $96 \%$ of the students showed normal values of Triglycerides while $4 \%$ of them showed higher values.
14. All male students showed normal values of HDL-C while $80 \%$ of female students exhibited lower levels of HDL-C, $20 \%$ of them were in the normal range.
15. About $89 \%$ of the students showed normal values of LDL-C while $11 \%$ of the students indicated higher levels of LDL-C.
16. About $96 \%$ of the students showed normal values of VLDL-C while $4 \%$ of the students exhibited higher levels of VLDL-C.
17. About $69 \%$ of the male students were in normal haemoglobin range, $19 \%$ of them were anaemic while $12 \%$ of them were in the higher range. Similarly, $63 \%$ of the female students were anaemic while $37 \%$ of them were in normal range.
18. About $93 \%$ of the staff showed normal values of Total Cholesterol while $7 \%$ indicated higher values.
19. About $80 \%$ of the staff showed normal values of Triglycerides while $20 \%$ of them showed higher values.
20. All male staff showed normal values of HDL-C while all female staff exhibited lower levels of HDL-C.
21. About $87 \%$ of the staff showed optimal values of LDL-C while $13 \%$ of the staff exhibited near optimal levels of LDL-C.
22. Around $67 \%$ of the staff showed normal values of VLDL-C, $27 \%$ of the staff exhibited higher levels of VLDL-C while $6 \%$ of them showed borderline high.
23. About $78 \%$ of the male staff were in normal range of $\mathrm{Hb}, 22 \%$ of them were anaemic. Similarly, $50 \%$ of the female staff were anaemic while $33 \%$ of them were in normal range while $17 \%$ of them were in the higher range.

## Recommendations:

1. Those subjects who are underweight should take balanced diet in right proportion.
2. Those subjects who are overweight or obese should do exercise regularly, control the diet according to their age, type of work and physiological condition.
3. Those subjects who are in prehypertension or in stage 1 or stage 2 of hypertension should reduce the salt intake, pickles, stress. They should take minimum eight glasses of water per day.
4. Subjects with high bad cholesterol (LDL-C, VLDL-C), Triglycerides and total cholesterol should avoid or reduce the intake of saturated fats like dalda, vanaspathi, ghee, prawns, red meat and trans-fat substances like potato chips etc. They can consume 2 or 3 garlic pieces daily to reduce the cholesterol.
5. Those subjects who are anaemic, should take more iron rich food like spinach, dates, jaggery, soyabeans etc.
