Innovative Practice Succulent Garden Establishment.

By: S. Swathi, Lecturer in Botany, Dept. of Botany.

Introduction:

- Many kinds of plants / various saplings are being planted in the college garden since many years, but still there is very little survivability.
- Efforts made to increase the greenery in the college premises and develop the garden in the college were not successful.
 - So we realized that there is a need to do something new to increase the greenness.
 - Then we looked at the nature of soil and thought succulent plants would suit it.

Activity:

- An area of the college garden was selected, watered and biofertilised.
- Collected various types of succulent plants / stem cuttings by the department of Botany and by the department of English.
- Planted a variety of succulent desert plants such as Bryophyllum, Dragon, Cissus quadrangularis, Kalonchoe varieties of species.
