Materials and Methods:

We are conducting sampling survey on who administrated to covishield in the Narayanpet District by creating Google Link and make a questionnaire on side effects of Covishield vaccine we got the data from 30 people who receive covishield vaccine . 10% people suffering from body pains, slight fever,5% people feel slightly discomfort in breathing ,on receiving of vaccine first day 95%of people normally lead their life ,0.5 %people severe breathing problems .15%people get body pains on 4 th day after one week 10% percent people suffering from fever, body pains, weakness (lethargy).10% people suffering from this problems up 15 days 1% of the people this problems continued p to three months .

Observation and Results

10% people suffering from body pains, slight fever,5% people feel slightly discomfort in breathing ,on receiving of vaccine first day 95%of people normally lead their life ,0.5 %people severe breathing problems .15%people get body pains on 4th day ,after one week 10% percent people suffering from fever, body pains, weakness (lethargy). 10% people suffering from this problems up 15 days 1% of the people this problems continued p to three months .96% of the people normally lead their life after receiving the vaccine finally covishield vaccine is useful to develop immunity in people of India.

Conclusion and summery

By the Covishield vaccine 97% people get herd immunity by producing the Antibodies finally it is very good vaccine to fight against the corona virus to protect the health ,but 3% people face the severe problems by hyper action of Immunity ,10% people get moderate problems by the covishield vaccine.
