Sir,

As part of our CBCS System, the Department of Computer Science is interested to extend voluntary service to your students. From our part, Sri V. Manoj Kumar., HEAD Dept. of Computer Science requesting you to give the permission to our student namely

A. Navitha BSc (MPCS) to teach computer skills to your students. It is for the sake of knowledge improvement to the students practically.

Thanking you sir,

Yours faithfully

TELANGANA STATE.**

**DEPARTMENT OF BOTANY**

**Preparation of Photo frames  
with the help of old news papers**

By

**Botany Students**

## REPORT:

### ECO-FRIENDLY PHOTO FRAMES

III and II year Botany students made a team and came to department of Botany with an idea to prepare photo frames with news papers and old carton boxes.

Staff of the department of Botany guided to collect the old news papers, old carton boxes and old drawing sheets to make their crafts. Stick like rolls prepared with News papers that are used as borders and old carton boxes used as back ground and with the help of a drawing sheet they made a photo frame.

These frames are used for the following purposes:

- To display the **contributions of scientists** in the life sciences
- To display a **research article**
- To display **diagrammatic representations**
- To display **classifications** etc,

Benefits of the frames:

- 1) **Reduces air pollution:** instead of burning the news papers and waste carton boxes, these are recycled in to eco friendly photo frames.
- 2) **Reduces the usage of plastic photo frame,** plastic is hazardous to environment.
- 3) Students learned the skills how to **re-use/ re cycle** the paper in to beautiful crafts.
- 4) If these photo frames became old, they **easily decomposed** in the soil.
- 5) Our students are going to sell these crafts in the online plat form like Amazon, flipkart etc. Hence learns **trading skills**.

## Rain Water Harvesting (Used As distilled water in chemistry Lab).

This is because rainwater is pure, distilled water evaporated from the sun - nothing else. However, when rain water falls from the sky, substances from the air and land melt into the rainwater. Fortunately, when rainwater soaks into the ground, it then becomes mineral water.

Roof top rainwater harvesting is the most common technique of rainwater harvesting for domestic consumption. In rural areas, this is most often done at small scale. It is a simple, low cost technique that requires minimum specific expertise or knowledge and offers many benefits. Rain water is collected on the roof and transported with gutters to a storage reservoir, where it provides water at the point of consumption or can be used for recharging a well or the aquifer. Rainwater harvesting can supplement water sources when they become scarce or are of low quality like brackish groundwaters or polluted surface water in the rainy season. However, rainwater quality may be affected by air pollution, animal

or bird droppings, insects, dirt and organic matter. Therefore regular maintenance (cleaning, repairs, etc.) as well as a treatment before water consumption (e.g. filtration or disinfection) are very important.

### Advantages

- \* Users can maintain and control themselves their systems without the need to rely on other members of the community.
- \* Local people can easily be trained to build RWH systems themselves. This reduces costs and encourages more participation, ownership and sustainability at community level.
- \* Rain water is better than other available & traditional sources.

### Disadvantages.

- \* Limited by the amount of rainfall and the size of the catchment area and storage reservoir.
- \* Supply is sensitive to droughts occurrence of long dry spells and droughts can cause water supply problems.
- \* The cost of rainwater catchment systems almost fully incurred during initial construction.
