ACKNOWLEDGEMENTS

I wish to express my sincere thanks to almighty for showing his blessing on me to develop this project

I would like to acknowledge my sincere thanks to **Mr. S.RAJU, Faculty of COMMERCE, GOVT DEGREE COLLEGE NARSAPUR** for his excellent guidance and supervision for the completion of this project successfully

I wish to thank to all my faculty members of GOVT DEGREE College of Department of Commerce & well wishers who has supported me all along in carrying out this project

I am thank full to the management of **“FINANCIAL PERFORMANCE OF SBI LIFE INSURANCE AND ICICI PRUDENTIAL LIFE INSURANCE”** for their kind allowing me to undertake this project and its various employees who helping towards the completion of the project successfully in the esteemed organization

INTRODUCTION

RATIONALE OF THE STUDY:

Why the need for the study?

- To compare the companies to identify which company is the market leader.
- To understand their financial performance.

What information will the study add?

- This research will help in analysis of companies.
- This research will make us understand the companies' market share, financial strength and quality of their business.

INTRODUCTION OF THE INDUSTRY:

Insurance is the backbone in managing the risk of the country. The insurance providers offer diversity of products to business, thus ensuring protection from risk thereby guaranteeing financial stability .It helps individual and organization to minimize the consequences of risk which impart significant cause on the growth and development of insurance industry. Insurance plays a key role in stabilizing the economy, trade and commerce.

What is Life Insurance?

(Life Insurance) is defined as a contract between the policy holder and the insurance company, where the life insurance company pays a specific sum to the insured individual's family upon his death. The life insurance sum is paid in exchange for a specific amount of premium.

The Indian Insurance Industry is divided into 2 basic sectors – **Life Insurance** and **Non-life Insurance** (also called **General Insurance**) Both these sectors are regulated by **Insurance Regulatory and Development Authority (IRDA)** of India which is a government body which frames the rules for the entire industry and all insurance companies have to abide by them. IRDA is the policy maker for the entire insurance industry in India and also serves as the custodian of consumers rights.

Growth of Life Insurance Industry

As an industry, insurance is regarded as a slow-growing, safe sector for investors. This perception is not as strong as it was in the 1970s and 1980s. (A Brief Overview of the Insurance Sector) . The Indian Insurance has been growing rapidly since 2000, as it was liberalised after more than 50 years of monopoly of LIC, where private life insurers have entered the insurance sector with innovative practices leading to more business. Indian consumers, who have always seen life insurance as a tax saving system, are now suddenly turning to the private sector and snapping up the new innovative products on offer. The Private players have taken some market share from LIC, and major growth has happened because of market expansions. The Indian Insurance Industry is getting ready for new era, where it is building world-class risk Management capability. The insurance industry has come a long way from being an open competitive market to nationalized then back to a liberalized market in India.

Current market Scenario

According to (Indian Insurance Industry Report , 2021) the insurance industry of India has 57 insurance companies 24 are in the life insurance business, while 33 are non-life insurers. Among the life insurers, Life Insurance Corporation (LIC) is the sole public sector company. According to (McKinsey, 2007) it was estimated that India is likely to emerge as the fifth largest market in the world by 2025.

In India, most private companies have entered into business with collaboration with established Insurance Companies in the world, both in the life and non-life Insurance Sectors. These global players' skills contribute to the performance of the Indian insurance sector, as it replicates the learning acquired from other industries over a long span of time. The international partner of any insurance firm in India is not allowed to own more than 26% of the shares in Indian insurance company as per IRDA regulations. We have seen big financial groups in India like SBI, ICICI and HDFC enter this space and become aggressive players. . Other famous corporate groups like the Tata's, Birla's and the Ambani's have also formed insurance companies.

INTRODUCTION TO THE COMPANY:

For the purpose of the present study, two renowned private life insurance companies namely, ICICI Prudential Life Insurance and SBI Life Insurance were selected. Brief profiles of the selected insurers are as follows:

SBI Life Insurance Company Ltd.

It is a joint venture life insurance company between State Bank of India (SBI), the largest state-owned banking and financial services company in India, and BNP Paribas Cardif. It incorporated October 11, 2000, and received permission from IRDA on March 29, 2001, to carry on the life insurance business. SBI has a 62.1% stake in the company and BNP Paribas Cardif owns a 22% stake. Other investors are Value Line Pte. Ltd. and MacRitchie Investments Pte. Ltd., holding a 1.95% stake each while the remaining 12% is free float stake with public investors.

SBI Life incorporated with an authorized capital of Rs. 2000 crore, while its paid up capital is Rs. 1000 crore. SBI Life, which started its operations with the vision “To be the most trusted and preferred life insurance provider,” initially depended upon Bancassurance and now is developing its own agency team for selling insurance products. SBI Life’s insurance products include various policies meant to address different needs of different sections of the society. It offers unit-linked, child plans, protection plans, saving plans, retirement, group plans, etc. With customer service excellence and product innovations, the company has been growing year after year. SBI Life Insurance has received many awards and accolades for the work in the field. Following are some of them:

- SBI Life Insurance has won ‘Brand of the Year 2016-17’ award in the insurance category
- SBI Life Insurance has won ‘Private Sector Life Insurance Company of the Year’ award at Fintelekt Insurance Awards
- SBI Life Insurance has won ‘Bancassurance Leader, Life Insurance’ in large companies category.

ICICI Prudential Life Insurance Company Limited

It is a life insurance company in India. Established as a joint venture between ICICI Bank and Prudential plc, ICICI Prudential is engaged in life insurance and asset management business. The firm offers long term life insurance plans and is headquartered in Mumbai. In 2016, the firm became the first insurance company in India to be listed in the domestic stock exchanges.

ICICI Prudential Life Insurance Company has been promoted jointly by ICICI Bank limited, a leading private sector Indian bank, and Prudential Corporation Holdings Limited by contributing 74% and 23% capital, respectively. It was incorporated on July 20, 2000, and received a certificate of registration from IRDAI to carry out the life insurance business on November 20, 2000. ICICI Life began its operations in financial year 2001 with the vision to build an enduring institution that serves with sensitivity the protection and long-term saving needs of customers. ICICI Prudential Life, known as ICICI Life, has become the first insurance company in India to be listed on the NSE and the BSE in 2017. It offers health insurance, term insurance, savings, and retirement plans for individuals and groups to meet varied needs of the customers.

ICICI Prudential Life Insurance has received many awards and accolades for the work in the field. Following are some of them:

- ICICI Prudential Life has received ‘Life Insurance Company of the Year’ award at India Summit and Awards 2019
- ICICI Prudential Life has received ‘Life Insurance Provider of the Year’ by Outlook Money Awards 2018
- ICICI Prudential Life has received ‘Best Term Insurance Provider of the Year’ award by Money Today Financial Awards 2017-18
- ICICI Prudential Life is awarded as ‘Best Customer Orientation in Life Insurance’ award by Emerging Asia Awards 2018
- ICICI Prudential Life is awarded as ‘Best Growth in Life Insurance’ category by Emerging Asia Awards 2018.

JUSTIFICATION OF THE TOPIC:

What is the potential utility of the findings (local, national, global)?

- This analysis will help the investors who want to invest in such companies.
- To identify their good points and points of improvement.

What are the implications of the study?

- Comparison of market share.
- Comparison of profitability.
- Ratio analysis to find out their financial strength.
- Measuring Quality of the Businesses.

CHAPTER 2: REVIEW OF LITERATURE

National Reviews

International Reviews

NATIONAL REVIEWS:

1. (**Naidu & Paramasivan, 2015**) highlighted that the measurement of performance of insurance firms become important, because they not only include the money saving and risk transfer process, but also help to properly redirect funds in order to finance investment activities in the economy.
2. (**Joshi & Takodia, 2017**) study suggests that all life insurers need to raise understanding on the definition of life insurance and on different life insurance undertakings among investors in order to increase market share and growth in a sector. When looking at Life insurers, they must have adequate weightage for different factors such as the timeliness of pay-out and the sum of their claims, ensure that investors are at the best possible convenience in the settlement, provide integrity and retain strong financial position to draw the interest of investors.
3. (**Kumari, 2013**) analysed efficiency assessment of India's post-liberalization life insurance market by using different ratios. The study concluded that India has registered a rise in both insurance penetration and density since Indian insurance market was opened to private firms. India's life insurance spectrum is enormous. The total assets to earned premium ratio, investment income to earned premium ratio and investment income to total investment ratio represent an insurer's economic solidity and reveal the performance with respect to investment decisions.
4. (**Dr.Parmasivan, 2015**) has carried out a comparative analysis of insurance providers in India in the public and private Life Insurance Companies. Current ratio and debt equity ratio is estimated to measure the solvency ratio for financial efficiency. The analysis shows that LIC already dominates the market. The new commercial channels of promotion are used by private sector insurance providers in comparison to LIC. The sale of more plan-linked units allows private insurers to capture LIC market share. Private insurers are also better than LIC's solvency and lapse ratios. In comparison with private life insurance the service of death lawsuits was higher for LIC.
5. (**Mishra, 2015**) suggest that the current public insurers with ensuring cost-effectiveness should stay competitive also. These public sector firms have taken a range of steps with regard to competition with private sector businesses. But, despite changing their strategy and

ideology in the post-Reform era, the government sector companies do need to reassess their current status. Insurance firms must ensure that premium goods are guaranteed at a fair price and companies can reduce the price of the commodity by reducing costs. Success depends on their sustainability, competitiveness, reliability and quality of service performance.

6. **(Bodla, Bodla, & Tondon, 2017)** analysed and compared the profits of life insurance firms in India (Public and Private). The 10-year comparison frame for the analysis varied from 2007 and 2016. Seven factors, including Net Premium, Investment income, Underwriting income, asset return, combined ratio, solvency ratio and profits were used for analysis of income and financial results. The analysis showed that the net average premium over the last five years was the highest for ICICI prudential followed by the HDFC Standard and SBI Life, while the lowest premium for the private sector life insurers was mobilised by IDBI Federal. They concluded, too, that in almost every private sector corporation in the past five years, the CAGR's underwriting revenue has decreased.

7. **(Gulati & Jain, 2011)** analysed business performance of all life insurers in industry on the basis of various indicators. LIC was the highest rider in all forms of premiums whereas in the private sector, ICICI Prudential Life Insurance led the Insurance Industry followed by SBI Life Insurance and Bajaj Allianz Life Insurance. The study suggested that even after the entry of private sector, the growth of public sector undertaking had not resulted in downfall even after facing numerous opportunities and challenges.

8. **(Bawa & Chattha , 2013)** examines the financial performance of Indian life insurance companies by analysing their profitability determinants. Financial Efficiency was calculated using financial ratios such as the current ratio, solvency ratio, equity ratio, and insurance debt ratio. The samples for this analysis are 18 Indian Life Insurers (including 1 public and 17 private life insurers) and the study period is from 2007-08 to 2011-12. According to the report, the public sector LIC is the most liquid of all life insurers. Future General Life Insurance, IDBI, Sahara, Shri Ram Life Insurance, and SBI Life Insurance have a strong cash position in comparison to other private insurers. Life insurers like Aviva, Bajaj Allianz, IDBI, Max Life, Sahara and SBI Life insurance are more solvency-friendly than other insurers .Bajaj Allianz and ICICI Prudential Return on Asset Measurements sounds good.

9. **(Dar & Bhat, 2015)** evaluate the financial statements and soundness of selected public and private life insurance companies. The statistical findings of the analysis reveals that there are significant statistical variations in the capital adequacy, revenue, profitability and liquidity

adequacy among selected private life insurers is much greater than the average amount of capital of public life insurer. But the public life insurers surpass the private life insurers in their profitability in the analysis period. The study also showed that public life insurers had a higher liquidity in relation to private life insurers during the examined period.

10. **(Solanki, 2016)** examined the profitability of life insurance companies. For measuring the profitability of the companies various ratios were calculated. The study shows that the private sector life insurances companies should strive to increase its business by issuing more and more policies in order to retain its market share in the competitive scenario.

11. **(Gour & Gupta , 2012)** determined the solvency ratio of Indian Life insurance companies for the period of 3 years from 2009-10 to 2011-12. It analysed whether performance of different companies was similar or there was any significant difference. On the basis of solvency ratio, ranks were assigned to different companies which showed that ICICI found the best among selected companies of industry followed by Birla Sun Life, SBI, HDFC and LIC. The paper also observed that solvency of life insures depend on returns received from total investible funds and interest rate.

12 **(Vasavi & Reddy, 2020)** analysed that there is a significant difference in the earnings and profitability performance of ICICI Prudential Life Insurance and SBI Life Insurance. The findings suggested that ICICI Prudential Life Insurance outperformed SBI Life Insurance for two indicators of the three indicators chosen for the report. ICICI Prudential Life Insurance has shown itself to be a more stable insurer by having a higher mean valuation for the income on investments ratio and return on equity ratio. Although ICICI Prudential Life Insurance has taken SBI Life Insurance's lead over the whole study period in retaining the higher investment earnings ratio, it is evident that its results include a persistent decrease in its investment earnings ratio.

13. **(Neelaveni, 2012)** evaluated the performance of five life insurance companies in the period of 2002-03 in terms of various plans and policies on the basis of annual growth rate. The study concluded that LIC being the public sector insurance provider was lagging behind due to competition faced by private insurers whereas in terms of financial aspects, private life insurance providers were doing well.

INTERNATIONAL REVIEWS:

1. According to **(McKinsey, 2011)** the Indian Life Insurance sector is the lowest-profit market for shareholders in all Asian nations, However, according to IRDA figures in 2010-11, the Life insurance industry showed net income of Rs 26,57 billion compared to a net loss of Rs 9,89 billion in 2009-10.
2. **(Malik, 2011)** determined the relationship of profitability and internal factors of insurance companies in Pakistan. Multiple regression models have been used to determine specific factors under which profitability has been taken as a dependent variable while age, size of company, volume of capital, leverage and loss ratio as independent variables. The study covered the time period from 2005 to 2009. The findings suggested that there was no relationship of profitability with age, but significant positive relationship with size and volume of capital, and significantly negative relationship with loss ratio and leverage.
3. **(Bikker, 2012)** investigated the competitiveness and efficiency in the Dutch Life Insurance Industry by the evaluation of unused scale economies and measuring efficiency market share dynamics between 1995 to 2010. The result of the study showed that economies significantly decrease with size of insurer and unused economies of scale did not exist under strong competition.
4. **(Akotey, Sackey, Amoah , & Manso, 2013)** examines in particular the main drivers of Ghana's life insurance industry's profitability. The annual financial statements of ten life insurance companies covering a period of 11 years (2000-2010) were sampled and analysed through panel regression. The results showed that while gross written premiums relate positively to the performance of profits by insurers, their relationship to investment income is negative. The findings also revealed that life insurers suffered considerable damages as a result of overtrading and price reductions.
5. **(Ayele, 2012)** explores the effect on Ethiopia's success of the insurance industry from 2003 to 2011 for the period of 9 years. The samples taken for this analysis are 9 Life Insurance Companies. The findings of the regression analysis shows that the most important determinants of the success of life insurance industry are leverage, scale, amount of stock, growth and liquidity, while ROA has statistically negligible relation to, age and tangibility.

6. In **(Greene & Segal , 2004)** Research 'Profitability and Economical efficiency in the U.S. Life insurance industry' the relationship between cost inefficiency and sustainability has been discussed in the US Life Insurance Industry. An established, dynamic life insurance market can be the primary engine of sustainability and cost-effectiveness. The study indicates that cost inefficiency is significant in comparison to profits in the life insurance sector and that inefficiencies are adversely correlated with performance ratio including equity income.

7. **(Smajla, 2014)** highlighted Croatian insurance firms level of financial well-being using CARMEL Model. This research is being conducted in Croatia on 24 insurance undertakings. The study found that company liquidity ratios were not good and suggests that the health of the insurance firms capital adequacy and liquidity indicators be taken into account by the Croatian regulatory bodies.

CHAPTER 3:

RESEARCH METHODOLOGY

Objectives of the Study

Research Hypothesis

Scope of the Study

Research Design

Limitation of the study

OBJECTIVES OF THE STUDY:

The main objective of the present study is to study the financial performance of SBI and ICICI Prudential life insurance companies. The other objectives of the present study are the followings.

- I. To evaluate the financial soundness, business efficiency and overall performance of SBI Life Insurance and ICICI Prudential Life Insurance.
- II. To analyse the solvency, profitability and liquidity position of SBI Life Insurance and ICICI Prudential Life Insurance for last three years (i.e. FY 2020 to FY 2023).

RESEARCH HYPOTHESIS:

H0: There is no significant difference between Current Ratio of SBI Life Insurance and ICICI Prudential Life Insurance.

SCOPE OF THE STUDY:

The present study is based on secondary data, which has been extracted from different websites, National and International articles as well as annual reports of ICICI Prudential Life Insurance and SBI Life Insurance. To analyse the quantitative data, the ratio analysis has been used. For the purpose of the present study, two renowned private life insurance companies in India namely, ICICI Prudential Life Insurance and SBI Life Insurance are selected. This study aims to examine the profitability performance of ICICI Life and SBI Life during the period 2021-22 to 2022-2023.

RESEARCH DESIGN:

SAMPLE OF THE STUDY:

The sample for this study includes 2 Indian life insurers namely, ICICI Prudential Life Insurance and SBI Life Insurance.

DURATION OF THE STUDY:

The research analyses the data for 3 years from 2017-18 to 2019-20

SOURCE OF DATA:

This study mainly depends on the secondary data. The relevant and required data were collected from the text books, websites, National and International articles, as well as annual reports of ICICI Prudential Life Insurance and SBI Life Insurance.

TOOLS and TECHINIOUE:

The present study is an analytical study. For the analysis of data in the form of various profitability ratios, liquidity ratio, Persistency Ratio, Solvency Ratio and the statistical tools like T-Test have been employed.

LIMITATION OF THE STUDY:

- The data collected for the study depends on published financial statements of the companies which may incorporate some drawbacks.
- The horizon of the study merely confined to very less number of variables as the determinants of insurance company's profitability and measuring financial performance without considering any overall performance measurement tool.
- The data which has been used for the study mainly secondary data, so limitation of secondary data remains with it and also applies to this study.
- The Financial statement study is based on only three years.

CHAPTER 4:

DATA REPRESENTATION AND ANALYSIS

Data Representation & Interpretation

Hypothesis Testing

DATA REPRESENTATION AND INTERPRETATION:

LIQUIDITY RATIOS:

Liquidity is a very critical part of a business. Liquidity is required for a business to meet its short term obligations. A higher liquidity ratio represents that the company is highly rich in cash.

Liquidity ratios determine how quickly a company can convert the assets and use them for meeting the dues that arise. The higher the ratio, the easier is the ability to clear the debts and avoid defaulting on payments.

This is a very important criterion that creditors check before offering short term loans to the business. An organisation which is unable to clear dues results in creating impact on the creditworthiness and also affects credit rating of the company.

A. Current Ratios – Current Ratio also known as the working capital ratio is the most widely used ratio. The current ratio is a measure of a company's ability to pay off the obligations within the next twelve months. This ratio is used by creditors to evaluate whether a company can be offered short term debts. Thus, Current Ratio is a measurement of financial health of enterprise.

Computation: The formula for calculating Current Ratio is:

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}$$

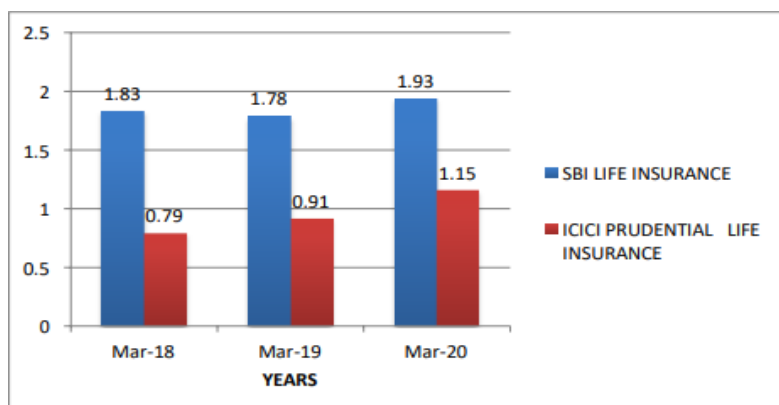

The ideal level of Current Ratio is 2:1. The ratio is considered as safe margin of solvency due to the fact that if the current assets are reduced to half, then also the creditors will be able to get their payments in full.

Significance of Current Ratio

- This financial metric helps to determine a company's immediate financial standing.
- A higher ratio often indicates greater liquidity and more stability.
- The financial tool helps to understand a firm's working capital requirement more effectively.
- It comes in handy for making an informed investment-related decision.

TABLE 1 - CURRENT RATIO		
YEAR	SBI LIFE INSURANCE	ICICI PRUDENTIAL LIFE INSURANCE
MAR 2018	1.83	0.79
MAR 2019	1.78	0.91
MAR 2020	1.93	1.15

GRAPH 1-CURRENT RATIO

Interpretation:

- Graph 1 depicts that the current ratio is fluctuating during the study period in the case of SBI Life Insurance. A considerable decline in the current ratio from 1.83 in FY 2018 to 1.78 in FY 2019 and an increase in the ratio from 1.78 in FY 2019 to 1.93 in FY 2020 can be observed from the graph whereas there is a constant increase in the current ratio of ICICI Prudential Life Insurance from FY 2018 to FY 2020 i.e. from 0.79 to 1.15 respectively.
- The Current ratio is higher in SBI Life Insurance than ICICI Prudential Life Insurance for all the years during the study period.

B. Quick Ratios- Quick Ratio also known as Liquid Ratio is used to determine whether a company or a business has enough liquid assets which are able to be instantly converted into cash to meet short term financial obligations.

Computation: The formula for calculating Quick Ratio is:

$$\text{Quick Ratio} = \frac{\text{Quick Assets}}{\text{Current Liabilities}}$$

Quick ratio of 1:1 is an accepted standard, since for every rupee of current liabilities, there is a rupee of quick assets.

Significance of Quick Ratio:

It is precisely an indicator of a company's ability or limitation in discharging its debts and obligations. A company's lenders, suppliers and investors rely on quick ratio to determine if it has enough liquid assets for discharging its short-term liabilities.

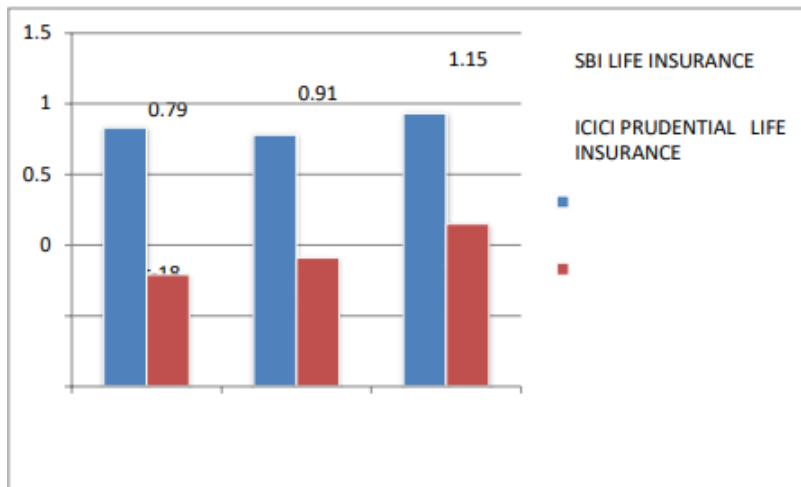

TABLE 2 - QUICK RATIO

YEAR	SBI LIFE INSURANCE	ICICI PRUDENTIAL LIFE INSURANCE
MAR 2021	1.83	0.79
MAR 2022	1.78	0.91
MAR 2023	1.93	1.15

2.5

GRAPH 2- QUICK RATIO

2 1.83 1.78 1.93

Interpretation:

- Graph 2 depicts that the quick ratio is fluctuating during the study period in the case of SBI Life Insurance. A considerable decline in the quick ratio from 1.83 in FY 2018 to 1.78 in FY 2019 and an increase in the ratio from 1.78 in FY 2019 to 1.93 in FY 2020 can be observed from the graph whereas there is a constant increase in the quick ratio of ICICI Prudential Life Insurance from FY 2020 to FY 2023 i.e. from 0.79 to 1.15 respectively.
- The Quick ratio is higher in SBI Life Insurance than ICICI Prudential Life Insurance for all the years during the study period.

PROFITABILITY RATIOS:

The primary objective of each business enterprise is to earn profits. In fact profit earning is considered essential not only for the survival of the business but is also required for its expansion and diversification. Profitability ratios are a type of accounting ratio that helps in determining the financial performance of business at the end of an accounting period. Profitability ratios show how well a company is able to make profits from its operations.

Net Profit Ratio (%) – This ratio establishes the relationship in terms of percentage between Net Profit and Revenue from Operations, i.e., Net Sales. It shows the percentage of Net Profit earned on Revenue from Operations.

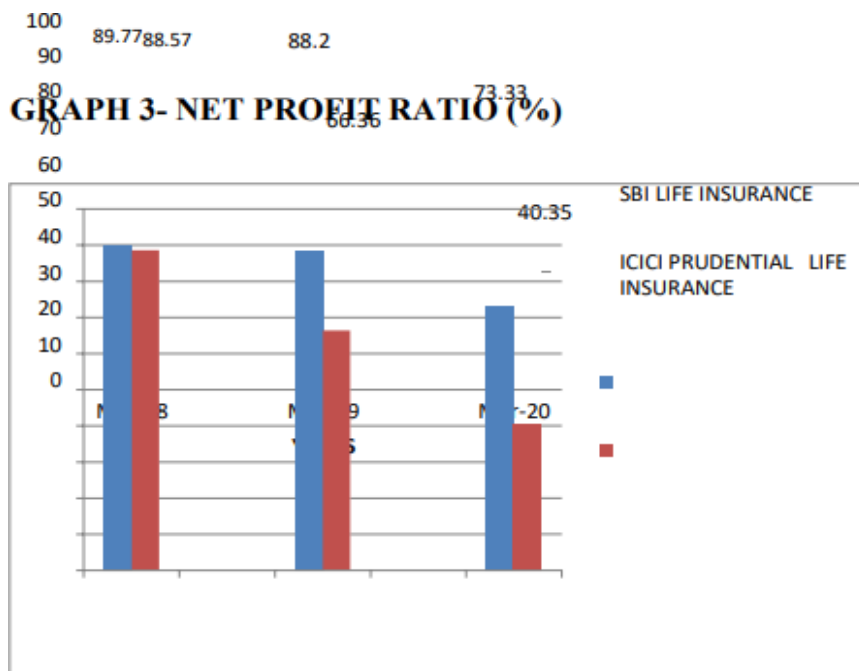

Computation: The formula for calculating Net Profit Ratio is:

Higher the net profit ratio, better the business.

Significance of Net Profit Ratio:

- Investors, shareholders and business owners can review the firm's net profit margin to analyse its growth trends effectively.
- Net Profit Ratio is an indicator of overall efficiency of the business.

TABLE 3-NET PROFIT RATIO (%)		
YEAR	SBI LIFE INSURANCE	ICICI PRUDENTIAL LIFE INSURANCE
MAR 2021	89.77	88.57
MAR 2022	88.20	66.36
MAR 2023	73.33	40.35

Interpretation:

- Graph 3 depicts that there is a considerable decline in the Net Profit Ratio from 89.77% in FY 2021 to 73.33% in FY 2022 in the case of SBI Life Insurance and from 88.57% in FY 2021 to 40.35% in FY 2023 in the case of ICICI Prudential Life Insurance.

PERSISTENCY RATIO (%)

Persistency is a key parameter for insurance companies. It measures the proportion of policy holders who have continued with their policies. It indicates the ability of the Company to retain customers. In India, the persistency ratios are published for the 13th month, 25th month, 37th month, 49th month and 61st month as majority of savings regular premium policies have a minimum 5-year premium payment period.

Computation: The formula for calculating Persistency Ratio is:

$$\text{Persistency Ratio} = \frac{\text{Number of Policyholders Paying the Premium}}{\text{Net Active Policyholders}} \times 100$$

Higher Persistency Ratio indicates a large pool of satisfied customers

Lower Persistency Ratio indicates inability to retain customers.

Significance of Persistency Ratio:

- It's important for insurers to maintain a persistent book as it contributes to profitability.
- It gauges the trust customer have in long-term products and services being offered by the insurer.

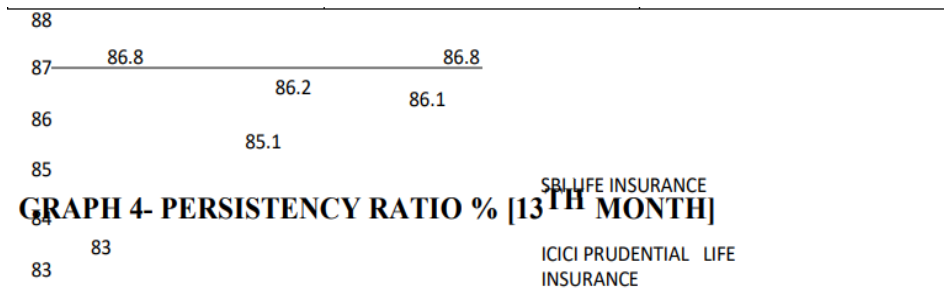

A. PERSISTENCY RATIO% [13TH MONTH] –

The 13th month persistency measures the renewal premium paid by the policyholder at the commencement of the second year.

It reflects the quality of the sale made by the company.

TABLE 4- PERSISTENCY RATIO % [13TH MONTH]

YEAR	SBI LIFE INSURANCE	ICICI PRUDENTIAL LIFE INSURANCE
MAR 2021	83.0	86.8
MAR 2022	85.1	86.2
MAR 2023	86.1	86.8

The 13th month persistency ratio is higher in ICICI Prudential Life Insurance than

SBI Life Insurance for all the years during the study period.

B. PERSISTENCY RATIO% [49TH MONTH] -

The 49th month persistency measures the renewal premium paid by the policyholder at the commencement of the fourth year.

The 49th month tells about the ability of the Insurance Companies to retain their customers.

YEAR	SBI LIFE INSURANCE	ICICI PRUDENTIAL LIFE INSURANCE
MAR 2021	63.9	64.2
MAR 2022	66.4	65.0
MAR 2023	67.3	67.3

Interpretation:

Graph 5 depicts that the 49th month persistency ratio (based on premium) has increased from 63.9% in FY 2020 to 67.3% in FY 2023 in case of SBI Life Insurance and from 64.2% in FY 2021 to 67.3% in FY 2020 in the case of ICICI Prudential Life Insurance.

The 49th month persistency ratio is lower in SBI Life Insurance in the FY 2021, it becomes higher than ICICI Prudential Life Insurance in the FY 2022 and then becomes equal to ICICI Prudential Life Insurance in the FY 2023

SOLVENCY RATIO (%)

Solvency is a regulatory measure of capital adequacy. It is critical in determining any organisation's ability to meet future contingencies and fund growth plans. It defines how good or bad an insurance company's financial situation is on defined solvency norms. IRDAI mandates a minimum solvency ratio of 150% to minimise bankruptcy risk. (Khatri, 2020)

Computation: The formula for calculating Persistency Ratio is:

$$\text{Solvency Ratio} = \frac{\text{Available Capital}}{\text{Required Capital}}$$

Higher the solvency ratio, the greater the chances of policyholders claim getting paid.

Lower Solvency ratio indicates inability of the Company to pay claims and meet future contingencies.

Significance of Solvency Ratio:

Solvency ratio is an indicator of a company's financial capacity to meet both short-

TABLE 6- SOLVENCY RATIO (%)

YEAR	SBI LIFE INSURANCE	ICICI PRUDENTIAL LIFE INSURANCE
MAR 2021	206	252
MAR 2022	213	215
MAR 2023	195	194

Interpretation:

Graph 6 depicts that the solvency ratio of SBI Life Insurance witnessed an increasing trend from 206% in the period 2019- 2020 to 213% in the period 2020- 2022, but in

The Solvency ratio is higher in ICICI Prudential Life Insurance for the FY 2021 and

FY 2022 by 46% and 2% respectively whereas it is lower than SBI Life Insurance for the FY 2023 by 1%.

Results

Since p is less than $p < 0.05$, H_0 is rejected and hence it is proved that there is a significant difference between Current Ratio of SBI Life Insurance and ICICI Life Insurance.

CHAPTER 5:

RESULTS AND DISCUSSIONS

Major Findings

Discussions & Suggestions

Conclusion

MAJOR FINDINGS:

The Insurance Sector is growing and grooming from subsequent past years considering their achievements and financial reports of both the companies.

The Current Ratio of ICICI Prudential Life Insurance indicates that current liabilities of the enterprise are greater than their current asset which means that the enterprise would be unable to meet its short –term financial obligations if they become due. ICICI Prudential is not in a good financial health.

The Current Ratio of SBI Life Insurance indicates that the current liabilities of the enterprise are lower than their current asset which means that the enterprise would be able to meet its short –term financial obligations if they become due. SBI Life Insurance gives the evidence of sound liquidity position.

SBI Life Insurance has higher Current Ratio than ICICI Prudential Life Insurance during the study period which shows that SBI Life Insurance has better Liquidity Position than ICICI Prudential Life Insurance.

The Quick Ratios and Current Ratios of both the companies are same which means that there are no inventories and prepaid expenses in both the firms.

There is a decline in the Net Profit Ratio during the study period of 3 years which shows deterioration in the operational efficiency of both the firms.

The Net Profit Ratio is higher in SBI Life Insurance than ICICI Prudential Life Insurance during the study period which shows that SBI Life Insurance is performing its operations more efficiently than ICICI Prudential Life Insurance.

The 13th month persistency ratios are improved from what they were in FY18 which reflects that there is a rise in the sale of both the companies Insurance policies.

ICICI Prudential Life Insurance has higher 13th month persistency ratio than SBI Life Insurance during the study period which shows that there are more sales of ICICI Prudential Life Insurance than SBI Life Insurance.

The 49th month persistency ratios are improved from what they were in FY18 which implies that the associated policyholders are satisfied with the customer service, customer loyalty, product utility, post sales service, returns on their product, product portfolio, etc. and are renewing their policies even after commencement of the fourth year.

Both the companies are at equal position in terms of 49th month persistency ratio for the FY 2020 which shows that both the companies have same ability to retain their customers in the particular year.

Both the Companies have a solvency ratio more than the mandatory requirement of 150% during the study period which shows that both the companies have enough buffers to settle all claims in extreme situations.

Since p is less than $p < 0.05$, H_0 is rejected and hence it is proved that there is a significant difference between Current Ratio of SBI Life Insurance and ICICI Life Insurance.

DISCUSSION AND SUGGESTIONS:

It is suggested to ICICI Prudential Life Insurance to raise extra finance to meet their short-term financial obligations.

In my opinion, it will be beneficial to both the companies if they cut down their expenses to increase their net profit as the study shows decline in their Net Profit Ratio during the study period of 3 years.

Both the companies should look for the factors which are leading to deterioration of their operational efficiency and taking necessary measures to counter them.

Since p is less than $p < 0.05$, H_0 is rejected and hence it is proved that there is a significant difference between Current Ratio of SBI Life Insurance and ICICI Prudential Life Insurance.

CONCLUSION:

The study has aimed to examine the financial performance of Indian life insurance companies i.e. SBI Life Insurance and ICICI Prudential Life Insurance through analysing the determinants of their profitability. Performance of companies can affect economy as a whole and therefore it requires empirical analysis to judge the performance. For measuring financial performance, financial ratios such as Liquidity Ratio, Profitability Ratio, Persistency Ratio and Solvency Ratio have been calculated. T-Test was also conducted to check if there was a significant difference between the Current Ratio of SBI Life Insurance and ICICI Prudential Life Insurance. The study evaluated that SBI Life Insurance have sound liquidity position and ICICI Prudential Life Insurance is not in a good financial health. Profitability measure of SBI Life Insurance is better than ICICI Prudential Life Insurance. But, there is a decline in the

Profitability Ratio during the study period which shows deterioration in the operational efficiency of both the firms. Hence, both the firms need to adopt immediate corrective measures to arrest the downfall in the ratio. As far as 13th persistency ratio is concerned the performance of ICICI Prudential Life Insurance is better than that of SBI Life Insurance but it can be seen that SBI Life Insurance is trying to increase their ratio over the previous years and has reached very near to the ratio of ICICI Life Insurance in FY 2020. Both the companies are at equal position in terms of 49th month persistency ratio for the FY 2020 which shows that SBI Life Insurance is equally capable to retain their customers than that of ICICI Prudential Life Insurance and is better in FY 2019. From the analysis of T-Test results, it is clear that there is a significant difference between Current Ratio of SBI Life Insurance and ICICI Prudential Life Insurance. Thus, in the light of above findings, it can be concluded that SBI Life Insurance is performing better than ICICI Prudential Life Insurance.
