DEPARTMENT OF PHYSICS

Report of Field Visit

DATE: 18.01.2020

The students of B.Sc were taken to field visit to Polasa Agriculture Research Station, situated in Polasa, Jagityal District. The institute has good Physics instrumentation for scientific study of climatic changes. The study of following instruments was demonstrated by the scientists at the institute:

1. **Anemometer:** An anemometer is an instrument that measures wind speed and wind pressure. Anemometers are important tools for meteorologists, who study weather patterns. They are also important to the work of physicists, who study the way air moves.
2. **Wind Vane:** The directions and intensity of winds can be measured by a wind vane. It is used to provide weather information. The wind can predict the intensity of storm. It is used in navigation purpose during sailing the boat.

There were two types of rain measuring instruments at the research station

3. **Non-recording type rain gauge:** Non-recording gauges don't record the rain but only collect the rain. Once the rain is collected, then it is measured by using a graduated cylinder. The volume of rain measured in the measuring cylinder directly represents the rainfall volume in cm of water depth i.e. the volume of water collected in cm^3 divided by area of the aperture (hole i.e. opening that admits water) of the gauge in cm^2 is equal to the depth of rainfall in cm.
4. **Recording type rain gauge:** This type of recorder has a float which is attached to a pen for recording. The pen marks on the special graph paper the amount of rainfall. Hence there is continuous recording of rainfall like a strip chart recorder. Precipitation can also be measured by the rain gauge.

The visit was found to be very useful as the students were made aware about the working principle of the above listed instruments. The data given by the instruments play a vital role for the farming community. The physics behind the working of the instruments was well understood by the students.

FIELD TRIP

DR.A.P.J.ABDUL KALAM SCIENCE THEME PARK, ADILABAD

Science theme park is outdoor natural science play ground. It incorporates art with scientific principles to offer visitors experiences of optical and mechanical phenomenon. Science park physics is an educational approach to teach fundamental physics. Students can learn about inertia, centripetal force, Newton's laws, world time, periodic table and properties of elements etc...

World Clock – World Time

Principal
Govt. Degree College
Luxettipet, Dist. Mancherial
A.P.J.

FIELD TRIP OUTCOMES

Field Trips are recognized as important moments in learning. Expose students to new experiences and can increase interest and engagement. Real world experiences from the start.

To learn how to use knowledge and abilities on Physical Geographical subjects in a specific situation in the field. Learning to recognize dominant geo-morphological process in several types of landscape.

Integrate several aspects of the problems of the area researched taking into consideration previously acquired knowledge.

Kakatiya University was established on 19th August, 1976 to fulfil the aspirations of Telangana people for higher education.

The prime function of the university Library is to provide study, research facilities & information needs of the students, Research Scholars, Teaching faculty and non-teaching staff of the University
