

# **ROLE OF GOVERNMENT DURING EMERGENCIES: ANALYSIS OF COVID-19 PANDEMIC**

## **Abstract**

The main aim of this survey is to analyze the role of government during the emergencies such as Covid 19. Government plays a major role in combating the problems and issues caused by the emergency.

But unfortunately these institutions namely, the union government, state government and the local governments have not been fully operationalised for handling the emergencies.

Therefore, this survey analyses the role of government through one to one interaction with the people on the issues like their satisfaction with government schemes, health care facilities, sanitation etc.

The survey also aims to draw suggestions from the citizens.

## **Findings**

- Most of the households had 4 to 5 members.
- In most of the cases the age of family members was between 0-70 years.
- Most of the households had family income in the range of 2 to 6 lakhs per annum.
- 46% of the people from the households reported that they were not satisfied with sanitation facilities during the pandemic.
- 53% of the people from the household were not happy and satisfied with the food related activities since the migrants didn't get the food supply during the pandemic.
- Only 23% of the people were satisfied with the medical facilities since there is lack of availability of oxygen cylinders and beds and there was least interference of government in private hospitals management.
- 66% of the households lost their employment during the pandemic.
- 38% of the households reported that they are not satisfied with government measures.
