About Online National level e-poster Competition:

Biodiversity the variety of life on Earth is essential to the healthy functioning of ecosystems. Native and non-native species, as well as the rapid population growth, are the primary causes of biodiversity loss which is now happening up to ten thousand times faster than for species of plants before. IPBES 2019 report states that one million species are now at risk of extinction and according to IUCN Red list of threatened species 23% mammals, 24% birds, 13% fish and 27% invertebrates are threatened with extinction. Due to extreme production of green house gases we are headed for a 2°C warmer climate. Pollution disturbs the natural behaviour of many species of plants and animals. Diversity of organisms in the world allows nutrient recycling. Biodiversity also allows plants to be pollinated by different types of insects.

As U.N. declared Biodiversity decade 2011-2020 is going to end leading to special year for the rest of what was global biodiversity decade for the period of 2011-2020 awareness on issues of Biodiversity will be on focus. U.N. proclaimed May 22 as the International Day of Biological Diversity (IDB) to increase

understanding and awareness on biodiversity issues and celebration of Biodiversity Week from 18th to 22nd May 2020. On this occasion we invite students from all disciplines to participate in the National level on line e-Poster competition on "Environmental Influences and Biodiversity".

The main focus of the e-Poster competition is to bring awareness on issue of biodiversity and impact of climate change on Biodiversity. Students (UG/PG/Research) of all disciplines but after the COVID-19 lockdown time and their solar ideas through e-Posters.
