

Best Practices

1. Awareness on Sanitization

Objectives :

- To eliminate or reduce open defecation
- For proper sanitization the mission will aim at changing people's attitude, mindset, and behaviors.
- To be kept clean with solid and liquid waste management.

The context :

The relationship between cleanliness and ^{health} ~~better~~ has been propagated in the awareness program.

The Practice :

The Department of Bio Technology students give awareness to the families in a particular area about sanitization.

2. STUDENT HEALTH PROFILE

Objectives

- To detect BMI of every individual student.
- To determine whether the student normal in their height and weight.
- To determine Hb Percentage of every student.
- To detect whether student is Anaemic or not.
- To understand about the four major blood group types present in the ABO blood group system and Rh blood group system.

The context :-

The Health profile of the student is very important to know BMI Hb and Blood group. The Blood grouping is very important when it comes to having a Blood transfusion. If blood is given to a patient that has a blood group types that is incompatible with the blood type of the blood that the patient receives, it can cause intravenous dumping in the patient's blood.

The practice :-

The Department of Bio Technology has conducted health profile for students by taking the help of senior students. We arranged new and sterilized equipment for the required procedure. We encouraged the students to come forward for doing tests. We also created awareness.
