

# Tagging QR codes

Ecoclub of GDC, Huzurabad

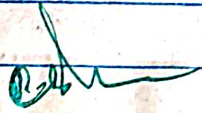

take initiative to make QR codes to the plants in the college campus.

In an effort to identify plants the ecoclub proposed tagging trees with QR codes. For this purpose Botany Dept. incharge C. Rajakumar generated QR codes and displayed them on plants.

Anyone with a smartphone can download a QR code scanning app, scan the code and see the scientific name and family of the plant. After knowing the Botanical name one can find massive amounts of information from the internet.

Principal G. Paramesh gave and teaching staff participated in this programme.
