

STUDENT STUDY PROJECT

ON

DIGITAL CERTIFICATE

Investigators: T.Sushmna, K.Bhavani, P.Alekya, C.Sravya, A.Laxmi Priya

Supervisor: M.Krishna, Dept. of Computer Science, Tara Govt. Degree College, Sangareddy.

Aims and Objectives:

The main motto of the proposed system is to provide particular student's details instantly as and when it is required by the issue team. The main objective is to make the student bonafide and transfer certificate application details more efficient and effective. This system will be managed by different files, so that the records can be accessed very easily and in an efficient way for implementation. The system can be used by unsophisticated user and it is very interactive to all the levels of users. It ought to guarantee method integration to the required extent, various reports should be generated as the need be. This system ought to conjointly make sure that there's no redundancy within the recorded information.

Analysis of Data:

Up to now there is no extendible application availability for Transfer Applications process. The existing system of the Bonafide and Transfer Applications Generation System is run manually by entering data in record books and keeping track of all the student data in the records. Adding, identification and searching of a particular record is quite difficult if it is in the form of long books. So this application is well required for the smooth administration of the Schools or Colleges certificate Issue team. The different levels involved in existing environment are:

- ❖ Manually it maintains the student's details in the form of records.
- ❖ Accessing a particular old record will require more time.

Findings:

- ❖ Entry of Student Details – Level – 1
- ❖ Verification and Modification of details along with TC Request – Level – 2
- ❖ Issue of Transfer Application and Bonafide Certificate – Level – 3

Conclusion:

Still now there is no extendible application availability for Transfer Applications process. Now we present system the Bonafide and Transfer Applications comes in Digital. Now Generation System is run digital by entering data in system and keeping track of all the student data in the records in the database. Adding, identification and searching of a particular record is very easy to get it.

So this application is well required for the smooth administration of the Schools or Colleges certificate Issue team.

The different levels involved in existing environment are:

- ❖ Digitally it maintains the student's details in the form of records in the database.
- ❖ Accessing the records easy with the Admission number.
