(57) Abstract :  
 The role of artificial intelligence on the relationship between job balance and Employee Productivity in IT industry. The aim of present study is to test the relationship between work-life balance and job performance. Herein order to achieve the objectives, primary data were collected from 166 employees of selected private banks and the structured questionnaire was administered to collect the data and analyzed by using artificial intelligence and further the findings of the study revealed that work-life balance has positive and significant relationship with job performance in overall.

(57) Abstract :  
 This invention is an image processing product with hardware and software components for identification of pests on crops and sending an alert message to the farmer. Pests and insects are one of the most common problems in agriculture. As a generic solution, pesticides and insecticides are sprayed over the plants which affect the food grains. There is always a certain level of residue insecticide or pesticide on the food grains which has a certain level of toxicity. In this invention, an image processing based drone system is made to scan or comb through the field identifying the insects or pests. An early identification system can give enable a solution where these insects or pests are eliminated without chemical spraying. The on-board electronic computing unit on the drone sends the image or the processed information to the server. The server sends the notification to the farmer's mobile application on identification of the pest or insect. Conventional tested image processing algorithms like CNN and SVM are employed integrated with standard machine vision data analysing techniques.

(57) Abstract :  
 One of the most important fields of study in mathematics, differential equations may be solved in a number of different ways. There is the analytic method and the numerical method; the analytic technique can only be used to a certain class of equations; hence the numerical method is utilized the majority of the time. The majority of studies on numerical approaches to the solution of first order ordinary differential equations have a tendency to adopt methods such as the Runge-Kutta method, the Taylor series method, and Euler's method. However, not a single study has actually combined Newton's interpolation and the Lagrange method to solve first order differential equations. In order to find solutions to the issues posed by first-order differential equations, this investigation will make use of both Newton's interpolation and the Lagrange technique.
