- Geographical area of India is 32,87,263 sq km. Within it are 870 notified PAs (as on Sept 2019) covering an area of 1,65,158.54 sq km or 5.02% of India's land area.

- The break-ups are as follows:
 - 104 National Parks: Area - 40,501.13 sq km or 1.23%SSI
 - Sanctuaries: Area - 1,19,775.80 sq km or 3.64%So, 655
 - National Parks and Sanctuaries comprising an area of 1,60,276.93 sq km or 4.87% of India's geographical area.
- In addition there are 88 Conservation Reserves: Area - 4356.49 sq km or 0.13% 127 Community Reserves: Area - 525.22 sq km or 0.02%

Community Conserved Areas (CCAs)

- Protected areas across the globe, managed and sustained by ordinary people. In fact, indigenous, mobile, and local communities have played a critical role in conserving a variety of natural environments and species for millennia, for various economic, cultural, spiritual and aesthetic purposes.
- Community Conserved Areas (CCAs) can be defined as *natural and modified ecosystems (with minimal to substantial human influence) - providing significant biodiversity, ecological services and cultural values - voluntarily conserved by indigenous peoples and other local communities through customary laws or other effective means.*
- These efforts range from the continued traditional protection of sacred sites, to a revived interest and engagement of communities in protecting their natural resources to community attempts at saving natural habitats from the penetration of destructive commercial and industrial forces.
- Many CCAs are much older than government-managed protected areas.
