## ONLINE COURSES

All of this means that students, from working professionals to recent high school graduates, find many reasons to take all or some of their courses online. The following list includes 10 advantages to online learning.

### **Variety of Programs and Courses:**

From traditional four-year universities to completely online career colleges, higher education today offers a variety of options for students. This means that no matter what students study, from nursing to neuroscience, they can find the courses or programs they need online. Students can also earn every academic degree online, from a career certificate to a doctorate.

### **Lower Total Costs:**

Online programs prove a more affordable option than traditional colleges. Though not all online degrees offer less expensive net tuition prices than traditional colleges, associated expenses almost always cost less. For example, there are no commuting costs, and sometimes required course materials, such as textbooks, are available online at no cost. In addition, many colleges and universities accept credits earned via free massive open online courses (MOOCs), the most recent advance in online education. These free online courses can help students fulfill general education requirements.

### **More Comfortable Learning Environment:**

Commercials that feature online students studying in their pajamas only skims the surface of one of the benefits of online education: no physical class sessions. Students listen to lectures and complete assignments sent to them electronically, with no need to fight traffic, leave work early for class, or miss important family time.

### **Convenience and Flexibility:**

Online courses give students the opportunity to plan study time around the rest of their day, instead of the other way around. Students can study and work at their convenience. Course material is always accessible online, making special library trips unnecessary. All of these benefits help students balance work and family commitments with their education.

**More Interaction and Greater Ability to Concentrate:**

While contradictory evidence about the rate of online student participation versus participation in traditional courses exists, one thing remains certain: Online courses offer shy or more reticent students the opportunity to participate in class discussions more easily than face-to-face class sessions. Some students even report better concentration in online classes due to the lack of classroom activity.

**Career Advancement:**

Students can take online courses and even complete entire degrees while working, while in-between jobs, or while taking time to raise a family. This academic work will explain any discontinuity or gaps in a resume as well. Also, earning a degree can show ambitiousness to prospective employers and a desire to remain informed and prepared for new challenges.

**Continue In Your Profession:**

Even if someone wants to complete a degree, it may not mean they want to leave their current job. For most students today, increasing college costs mandate that some students continue working while in school. The previously mentioned flexibility of online programs enable students to keep working while also pursuing academic credentials.

**Avoid Commuting:**

During snowstorms and thunderstorms, colleges may cancel classes to avoid putting commuting students at risk of dangerous driving conditions. Rather than miss important class sessions, students in online courses can always "attend" by participating in discussion boards or chat sessions, turning in their work on time, and watching lectures or reading materials. Many students also find substantial savings on fuel costs with no commute for classes.

**Improve Your Technical Skills:**

Even the most basic online course requires the development of new computer skills, as students learn to navigate different learning management systems (LMS) and programs. The participation skills students learn within their online courses translate to many professions, including creating and sharing documents, incorporating audio/video materials into assignments, completing online training sessions, etc. Some schools even offer students free laptops or iPads.

### Transfer Credits:

For college students who want to attend summer classes, but live too far from their colleges and/or work summer jobs, taking online classes from an accredited college and transferring the credits to their primary college can be beneficial. Students can earn college credit while still enjoying their summer vacation or fulfilling the responsibilities of their seasonal employment. Similarly, if a college or university does not offer enough open sections of a required course, students can take the course online at another college and transfer the credits.

Students in online programs can effectively manage their time, learn the materials, and complete assignments on their own schedules to name just a few benefits of online learning.

- IIT Bombay Has Entered MOU With Government of Telangana State and Offered Online Training Program to Enhance The Student Ability In Various Courses Like C, C++, Java, My Sql, Libre Office and Php, for both UG and PG Students.
- As per the instruction of IIT Bombay, We successfully registered students, conducted trainings then students received online certificates by passing the online examination conducted by IIT Bombay.

### **Introduction**

Mushrooms are being used as food and medicine from ancient times. Mushroom contains all essential amino acids, vitamin B complex, iron, calcium, potassium, phosphorous, folic acid and other biochemical compounds. It is also a good source of dietary fibre. It is regarded as highly edible even for people suffering from cholesterol problems, heart diseases, diabetes and cancer. Mushroom cultivation has now become a source for income generation since there is a large demand for healthy and quality food products. Many value added products are also obtained from mushrooms. The cultivation procedure is characterised by small initial investment and year round production. It is an eco-friendly agricultural practice. Considering the commercial viability and self-employment potential of mushroom cultivation and marketing, the Department is offering the same as an add on certificate course to the under graduate students of the College.

### **Aims of the Course**

- To enable the students to identify the edible and poisonous mushrooms.
- To provide hands-on training for the preparation of bed for mushroom cultivation and its harvesting, pests and diseases control and post harvesting management.
- To provide the students awareness about the marketing trends of Mushrooms.
- To give the students exposure to the experiences of experts in the field and to functioning mushroom farms.
- To help the students to learn a means of self-employment and income generation.

**Duration of Course:** The course shall extend over a period of three months (40hrs).

**Admission Procedure:** Candidates for admission to the course should be students of the New College, Chennai. Interested students shall apply for admission at the time of notification in the prescribed form.

## **Introduction:**

Green fodder is considered as the natural diet for livestock. Its production to meet the current demand has become a challenging task among livestock farmers. Due to several reasons, green fodder production has been facing crisis and so the livestock productivity. Due to increasing intensive system of rearing livestock, the need for green fodder is enormous. As the gap between the demand and supply of the green fodder for livestock becoming unconquerable, researchers and farmers are in search for an alternative fodder or fodder production method, that would restore fodder and livestock production.

Hydroponics technology has revolutionized the green fodder production in the 21st century. Hydroponics is a method of growing green fodder without soil in an environmentally controlled houses or machines. Many of the livestock farmers are switching to hydroponic fodder production from conventional production methods, as the fodder produced by this method are highly nutritious, provide sustainable fodder production round the year and conserve water.

## **Module-1 (4 hours)**

### **Hydroponics and Green Fodder:**

The word hydroponics has been derived from the Greek word 'water working'. Hydro means 'water' and ponics means 'working' and it is a technology of growing plants without soil, but in water or nutrient rich solution for a short duration in an environmentally controlled houses or machine.

"Fodder" refers particularly to food given to the animals (including plants cut and carried to them), rather than that which they forage for themselves in pasture and grazing land. It includes hay, straw, silage, compressed and pelleted feeds, oils and mixed rations, and also sprouted grains and legumes.

Hydroponic green fodder means "Fodder grown using hydroponics technology".

### **Nutritional value of Green fodder**

1. Natural diet for animals.
2. Improves fat and protein percentage in milk.
3. Rich in beta carotene and minerals that help in the synthesis of vitamin A.
4. Vitamin A has greater impact on reproduction.

## **Importance of Hydroponic green fodder**

### **Saves water**

Consumes 98% less water than conventional method and the used water is recycled.

### **Reduced growth time**

It takes only 8 days duration to develop from seed to fodder while it took 45 days for a conventional fodder to grow. Enhanced nutritive value – as the fodder contains the seed along with the fodder, it has higher crude protein content than conventional green fodder.

### **Marginal land usage**

Up to 1000 kg green fodder can be produced from 480 square feet area daily which is equivalent to conventional fodder (Co4) produced in 25 acres of cultivable land. Use 99% less land than conventional production method.

### **Constant supply**

Fodder can be produced round the year irrespective of the failure of monsoon, land availability, natural calamities, labour shortage. It promotes sustainable agriculture and livestock production.

### **Requires minimal man power and time**

Only 2 -3 hours of work daily, doesn't involve technical work. Farmer can do the work without difficulty.

### **Completely natural and organic**

Fodder is grown completely natural without the use of any pesticides.

### **Optimal production cost**

Production cost is optimal when compared to conventional fodder production.

Cost of production is 2.50 INR / kg of hydroponic maize fodder.

Hydroponic machine (1000 kg capacity) consumes only 40 units of current per day.

### **Reduce feed cost**

As the fodder contains more crude protein compared to conventional fodder it reduces the feed cost spent on the concentrate feed to half.

### **Minimal equipment usage**

Reduce the need for equipment and fuel used to plant, grow, harvest, transport, and store feed.

### **Nutritious fodder**

Hydroponic fodder along with seed and root (sprout mat) are highly edible and are rich in protein (10 – 17%). Ideal nutrients enriched fodder for livestock.

### Types of Hydroponic fodder

Yellow Maize, Cowpea, Horse gram, Sun hemp, Ragi, Bajra, Foxtail millet and Jowar has been grown successfully given good response from the livestock as a fodder.

## Module-2 (26 hours)

### Production of Hydroponic fodder from maize, horse gram, sunhemp and jowar

#### Protocol for fodder production

##### 1. Seed storage and preparation

Dry the seeds under direct sunlight one day prior to seed washing.

Remove broken seeds and dirt's from the seeds.

Store seeds in a dry and safe place.

##### 2. Seed washing

Take good quality seeds in a washing chamber.

Add water.

Wash the seeds with proper scrubbing by hand.

Keep for settling for 5 minutes.

Remove the light weight floating seeds.

Drain out water and again add water.

Stir manually by wooden stick for 5 minutes, keep settling for 5 minutes.

Drain water.

Repeat the above steps till, dirt and dead seeds are removed completely.

##### 3. Seed cleaning

Prepare 0.1% cleaning solution in a plastic chamber.

Add washed seeds to this 0.1% cleaning solution.

Stir manually by wooden stick for about 5 minutes.

Keep for 1 hour.

Drain the cleaning solution.

##### 4. Seed soaking

Prepare stimulant Solution in the soaking chamber as per quantity given.

Add seeds from the above steps to the soaking chamber.

Close the lid and keep for soaking for number of hours for the given seeds.

After soaking for the given hours, drain the stimulant solution.

#### **5. Seed germination**

Cover/ place the "After soaking seeds" with the clean dry fumigated gunny bag.  
Keep the seeds loaded gunny bags away from direct sunlight.  
Keep the lid open & keep for germination for number of hours.  
Sprinkle water on gunny bag every 2-3 hours so that the gunny bag remains wet.  
After given hours, remove the seeds from gunny bag take weight.  
About 35 to 40% increase in weight happen with about 90+% seed germination.

#### **6. Loading seeds in trays and racking**

Ensure that the trays are clean, washed with cleaning solution & free from dust  
Transfer "after germination seeds" on the trays equally and put them in the sprout  
Section (lower section where the height between two rows is around 5 inches) of  
machine  
Trays should be distributed evenly on both sides of the alley.

#### **7. Shifting of trays**

Shift trays to next level daily so that it moves one step ahead in the growth cycle.  
Take the last tray out from every row and put it back on the front side of the same  
row.

Ensure that all trays are moved one position every day

Ensure that all trays receive sufficient water.

If left side of the tray (in any tray) shows more growth then the right side (or vice-versa) then rotates the tray such that left side comes to the right side and right side of the tray goes to the left side.

#### **8. Harvesting**

Trays on the 8th day rack are ready for harvest on the next day.

Take out of the fodder mat from trays to feed livestock.

Wash the trays in clean water and then in cleaning solution before reusing it for the next cycle.
