#### **OBJECTIVE**

• Python is a computer programming language often used to build websites and software, automate tasks, and conduct data analysis.

Python provides a better structure and support for large

programs

than shell scripting. Support for functional and structured programming methods as well as OOP. It can be used as a

scripting

language or can be compiled to byte-code for building large applications.

### Goal is to

- ❖ Master the students to learn fundamentals of writing Python scripts
- ❖ Learn core Python scripting elements such as variables and flow control structures
- ❖ Write Python functions to facilitate code reuse
- Use Python to read and write files
- ❖ Make their code robust by handling errors and exceptions properly
- Explore Python's object-oriented features
- Search text using regular expressions

### SPOKEN TUTORIAL ONLINE COURSES

All of this means that students, from working professionals to recent high school graduates, find many reasons to take all or some of their courses online. The following list includes 10 advantages to online learning.

### Variety of Programs and Courses:

From traditional four-year universities to completely online career colleges, higher education today offers a variety of options for students. This means that no matter what students study, from nursing to neuroscience, they can find the courses or programs they need online. Students can also earn every academic degree online, from a career certificate to a doctorate.

#### **Lower Total Costs:**

Online programs prove a more affordable option than traditional colleges. Though not all online degrees offer less expensive net tuition prices than traditional colleges, associated expenses almost always cost less. For example, there are no commuting costs, and sometimes required course materials, such as textbooks, are available online at no cost. In addition, many colleges and universities accept credits earned via free massive open online courses (MOOCs), the most recent advance in online education. These free online courses can help students fulfill general education requirements.

### **More Comfortable Learning Environment:**

Commercials that feature online students studying in their pajamas only skims the surface of one of the benefits of online education: no physical class sessions. Students listen to lectures and complete assignments sent to them electronically, with no need to fight traffic, leave work early for class, or miss important family time.

#### **Convenience and Flexibility:**

Online courses give students the opportunity to plan study time around the rest of their day, instead of the other way around. Students can study and work at their convenience. Course material is always accessible online, making special library trips unnecessary. All of these benefits help students balance work and family commitments with their education.

### **More Interaction and Greater Ability to Concentrate:**

While contradictory evidence about the rate of online student participation versus participation in traditional courses exists, one thing remains certain: Online courses offer shy or more reticent students the opportunity to participate in class discussions more easily than face-to-face class sessions. Some students even report better concentration in online classes due to the lack of classroom activity.

#### **Career Advancement:**

Students can take online courses and even complete entire degrees while working, while in-between jobs, or while taking time to raise a family. This academic work will explain any discontinuity or gaps in a resume as well. Also, earning a degree can show ambitiousness to prospective employers and a desire to remain informed and prepared for new challenges.

#### **Continue In Your Profession:**

Even if someone wants to complete a degree, it may not mean they want to leave their current job. For most students today, increasing college costs mandate that some students continue working while in school. The previously mentioned flexibility of online programs enable students to keep working while also pursuing academic credentials.

### **Avoid Commuting:**

During snowstorms and thunderstorms, colleges may cancel classes to avoid putting commuting students at risk of dangerous driving conditions. Rather than miss important class sessions, students in online courses can always "attend" by participating in discussion boards or chat sessions, turning in their work on time, and watching lectures or reading materials. Many students also find substantial savings on fuel costs with no commute for classes.

### **Improve Your Technical Skills:**

Even the most basic online course requires the development of new computer skills, as students learn to navigate different learning management systems (LMS) and programs. The participation skills students learn within their online courses translate to many professions, including creating and sharing documents, incorporating audio/video materials into assignments, completing online training sessions, etc. Some schools even offer students free laptops or iPads.

#### **Transfer Credits:**

For college students who want to attend summer classes, but live too far from their colleges and/or work summer jobs, taking online classes from an accredited college and transferring the credits to their primary college can be beneficial. Students can earn college credit while still enjoying their summer vacation or fulfilling the responsibilities of their seasonal employment. Similarly, if a college or university does not offer enough open sections of a required course, students can take the course online at another college and transfer the credits.

Students in online programs can effectively manage their time, learn the materials, and complete assignments on their own schedules to name just a few benefits of online learning.

- ➤ IIT Bombay Has Entered MOU With Government of Telangana State and Offered Online Training Program to Enhance The Student Ability In Various Courses Like C, C++, Java, My Sql, Libre Office and Php, for both UG and PG Students.
- As per the instruction of IIT Bombay, We successfully registered students, conducted trainings then students received online certificates by passing the online examination conducted by IIT Bombay.

## Ways to Protect from COVID-19

#### **Course information:**

**Overview:** This course provides a general introduction to Acute Respiratory Infections (ARIs) and basic hygiene measures to protect against infection. By the end of the course, you should be able to describe basic information about ARIs including what they are, how they are transmitted, how to assess the risk of infection and list basic hygiene measures to protect against infection.

**Learning objective:** Understand the basic principles of acute respiratory infections, how to assess the risk of infection and basic hygiene measures to protect against infection.

**Course duration:** Approximately one month

**Certificates:** A Record of Achievement certificate will be available to participants who score **at least 80%** of the total points available across all of the quizzes.

#### **Syllabus:**

- ➤ Acute Respiratory Infection (ARIs) of public health concern
- > Introduction:
- ➤ How to protect yourself against Acute Respiratory Infections (ARIs)
- ➤ Basic hygiene measures
- ➤ Wearing a medical mask:
- ➤ All about masks in the context of COVID-19
- ➤ How to wear a fabric mask:

#### Module 1:

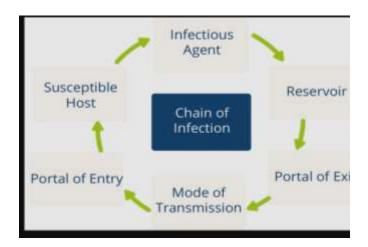

Acute Respiratory Infection (ARIs) of public health concern

#### **Introduction:**

Overall learning objective: To describe basic information about acute respiratory infections

including transmission, symptoms, treatment and prevention.

Infection prevention and control (IPC) is an applied discipline that affects all patient care activities in healthcare settings. IPC, including prevention of antimicrobial resistance (AMR), is an essential component of healthcare quality and patient safety. In this module you will learn how and why healthcare-associated infections (HAIs) occur and how IPC reduces their risk and spread. Effective IPC includes building a program with all healthcare personnel (HCP) playing their part to prevent the spread of pathogens and AMR.

#### **Module 2:**

How to protect yourself against Acute Respiratory Infections (ARIs):

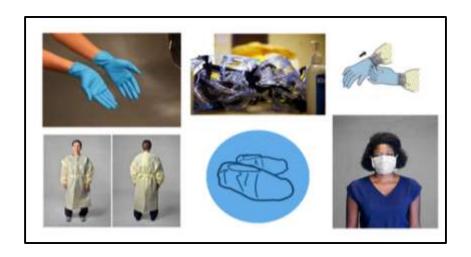

**Overall learning objective**: How to manage the risk from ARIs.

When used correctly, PPE provides a physical barrier that protects your eyes, nose, mouth, skin, and clothing. Safely putting on, using, and removing PPE during healthcare activities relies on human decision-making and performance; therefore, it is essential to recognize risk of potential exposures and be sure PPE is used correctly and appropriately.

Module duration: 5 hours

#### **Learning objectives:**

- Explain how personal protective equipment (PPE) is used in healthcare settings
- Identify types of PPE and rationale for use
- Describe how to safely put on, use, and remove PPE

#### Module 3

#### **Basic hygiene measures:**

#### Overall learning objective:

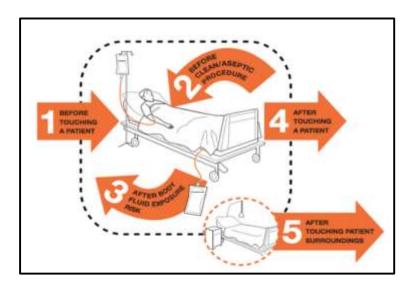

To describe basic hygiene measures to protect against ARIs.

**Overview**: The hands of health care workers (HCWs) play a critical role in keeping patients safe. If HCWs do not clean their hands at the right moments, using the proper methods, they can transmit infection-causing microorganisms through their hands from one patient to another. Performing hand hygiene at key moments is an important health care intervention. Hand hygiene reduces the transmission of microorganisms (including those that are antibiotic-resistant), increases patient safety, and decreases health care-associated infection (HAI). Effective, timely hand hygiene is a cornerstone of infection prevention and control.

#### **Learning objectives:** By the end of this course, participants should be able to:

- describe hand hygiene as a critical component of infection prevention and control;
- identify the 5 Moments for Hand Hygiene;
- discuss glove use and hand hygiene during patient care activities;
- demonstrate the correct way to wash hands with soap and water according to the WHO-recommended method;

- demonstrate the correct way to perform hand hygiene with an alcohol-based handrub (ABHR) according to the WHO-recommended method; and
- discuss key issues and considerations of hand hygiene in a health care facility.

#### Module 4

#### Wearing a medical mask:

#### All about masks in the context of COVID-19

Masks should be used as part of a comprehensive strategy of measures to suppress transmission and save lives; the use of a mask alone is not sufficient to provide an adequate level of protection against COVID-19.

If COVID-19 is spreading in your community, stay safe by taking some simple precautions, such as physical distancing, wearing a mask, keeping rooms well ventilated, avoiding crowds, cleaning your hands, and coughing into a bent elbow or tissue.

Make wearing a mask a normal part of being around other people. The appropriate use, storage and cleaning or disposal of masks are essential to make them as effective as possible.

#### Here are the basics of how to wear a mask:

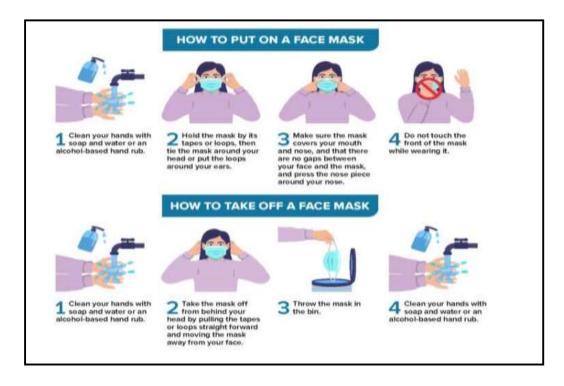

- Clean your hands before you put your mask on, as well as before and after you take it off, and after you touch it at any time.
- Make sure it covers both your nose, mouth and chin.

- When you take off a mask, store it in a clean plastic bag, and every day either wash it if it's a fabric mask, or dispose of a medical mask in a trash bin.
- Don't use masks with valves.

#### Module 5

#### How to wear a fabric mask:

Wearing a mask over your nose and mouth is required on planes, buses, trains, and other forms of public transportation traveling into, within, or out of the United States and while indoors at U.S. transportation hubs such as airports and stations. Travelers are not required to wear a mask in outdoor areas of a conveyance (like on open deck areas of a ferry or the uncovered top deck of a bus).

#### **Course out comes:**

#### 1. Get Vaccinated and stay up to date on your COVID-19 vaccines

- <u>COVID-19 vaccines</u> are effective at preventing you from getting sick. <u>COVID-19</u> <u>vaccines</u> are highly effective at preventing severe illness, hospitalizations, and death.
- Getting vaccinated is the best way to slow the spread of SARS-CoV-2, the virus that causes COVID-19.

• Government recommends that everyone who is eligible <u>stay up to date on their</u> <u>COVID-19 vaccines</u>, including people with weakened immune systems.

#### 2. Wear a mask

- Everyone ages 2 years and older should properly wear a well-fitting mask indoors in public in areas where the <u>COVID-19 Community Level</u> is high, regardless of vaccination status.
- Wear a mask with the best fit, protection, and comfort for you.
- If you are in an area with a high <u>COVID-19 Community Level</u> and are ages 2 or older, wear a mask indoors in public.
- If you are sick and need to be around others, or are caring for someone who has COVID-19, wear a mask.
- If you are at increased risk for severe illness, or live with or spend time with someone at higher risk, speak to your healthcare provider about wearing a mask at medium COVID-19 Community Levels.
- People who have a condition or are taking medications that weaken their immune system may not be fully protected even if they are up to date on their COVID-19 vaccines. They should talk to their healthcare providers about what additional precautions may be necessary.

#### 3. Stay 6 feet away from others

- Inside your home: Avoid close contact with people who are sick, if possible. If
  possible, maintain 6 feet between the person who is sick and other household members.
  If you are taking care of someone who is sick, make sure you properly wear a wellfitting mask and follow other steps to protect yourself.
- Indoors in public: If you are not <u>up to date on COVID-19 vaccines</u>, stay at least 6 feet away from other people, especially if you are at <u>higher risk of getting very sick</u> with COVID-19.

#### 4. Avoid poorly ventilated spaces and crowds

- If indoors, <u>bring in fresh air</u> by opening windows and doors, if possible.
- If you are at <u>increased risk of getting very sick</u> from COVID-19, avoid crowded places and indoor spaces that do not have fresh air from the outdoors.

#### 5. Test to prevent spread to others

- You can choose from many different <u>types of tests</u>.
- Tests for <u>SARS-CoV-2</u>(the virus that causes COVID-19) tell you <u>if you have an infection</u> at the time of the test. This type of test is called a **viral test** because it looks for viral infection.
- Regardless of the test type you select, a <u>positive test result</u> means that you have an
  infection and should <u>isolate</u> and inform your <u>close contacts</u> to avoid spreading disease
  to others.
- Over-the-counter <u>self-tests</u> are viral tests that can be used at home or anywhere, are
  easy to use, and produce rapid results. Anyone can use self-tests, regardless of their
  vaccination status or whether they have symptoms.
- COVID-19 <u>self-tests</u> are one of many risk-reduction measures, along with vaccination, masking, and physical distancing, that protect you and others by reducing the chances of spreading COVID-19.

#### 6. Wash your hands often

- <u>Wash your hands</u> often with soap and water for at least 20 seconds especially after you have been in a public place, or after blowing your nose, coughing, or sneezing.

#### About this Course

Over 500,000 people in India and over 8 million people worldwide are dying every year from cancer. As people live longer, the incidence of cancer is rising worldwide and the disease is expected to strike over 20 million people annually by 2030. This open course is designed for people who would like to develop an understanding of cancer and how it is prevented, diagnosed, and treated.

The course introduces the molecular biology of cancer (oncogenes and tumor suppressor genes) as well as the biologic hallmarks of cancer. The course also describes the risk factors for the major cancers worldwide, including lung cancer, breast cancer, colon cancer, prostate cancer, liver cancer, and stomach cancer. We explain how cancer is staged, the major ways cancer is found by imaging, and how the major cancers are treated.

#### Course out comes:

#### About this Specialization

The healthcare system is a rapidly evolving field with new research leading to advancements in medicine. Developed at Johns Hopkins University and led by top-ranked Hopkins faculty and cancer experts, this specialization on Cancer Biology focuses on the basics of cancer biology, how cancer metastasis occurs,

This specialization starts with an Introduction to the Biology of Cancer, introduces the molecular biology of cancer and the biologic hallmarks of cancer. The course also describes the risk factors for the major cancers worldwide, including lung cancer, breast cancer, colon cancer, prostate cancer, liver cancer, and stomach cancer. Experts at Johns Hopkins University explain how cancer is staged, the major ways cancer is found by imaging, and how the major cancers are treated.

The specialization takes a deeper dive in Understanding Cancer Metastasis, explaining how cancer spreads or metastasizes. This course will describe the major theories of metastasis and then describe the biology behind the steps in metastasis. The course also describes the major organs targeted by metastasis and describes how metastases harm the patient. Lastly, it focuses on Understanding Prostate Cancer, providing you with the tools to examine the incidence of prostate cancer, including risk factors, stages, and treatments at each stage.

#### Syllabus - What you will learn from this course

#### Incidence and Etiology of Cancer

In this first week, we'll get a high-level introduction to the basics of cancer biology as well as incidence and common types of cancer.

#### Genetics of Cancer

Now, we'll turn our attention to the genetics of cancer, variation and mutation, two-hit hypothesis, and genomic instability.

#### Ten Cellular Hallmarks of Cancer

All cancers share ten cellular hallmarks. This week, you'll learn to identify these hallmarks in order to distinguish a normal cell from a cancerous cell.

#### Metastasis: The Real Killer

The lethal agent of cancer is metastasis. This week, we'll take a good look at this deadly event, TNM staging, the metastatic process, and an ecological paradigm.

### **Course Content:**

## Introduction to the Biology of Cancer

#### 1 week

The course introduces the molecular biology of cancer (oncogenes and tumor suppressor genes) as well as the biologic hallmarks of cancer. The course also describes the risk factors for the major cancers worldwide, including lung cancer, breast cancer, colon cancer, prostate cancer, liver cancer, and stomach cancer. We explain how cancer is staged, the major ways cancer is found by imaging, and how the major cancers are treated. In addition to the core materials, this course includes two Honors lessons devoted to cancers of the liver and prostate. Upon successful completion of this course, you will be able to: - Identify the major types of cancer worldwide.

(Lecture 1) - Describe how genes contribute to the risk and growth of cancer.

(Lecture 2) - List and describe the ten cellular hallmarks of cancer.

(Lecture 3) - Define metastasis, and identify the major steps in the metastatic process.

(Lecture 4) - Describe the role of imaging in the screening, diagnosis, staging, and treatments of cancer.

(Lecture 5) - Explain how cancer is treated.

(Lecture 6) We hope that this course gives you a basic understanding of cancer biology and treatment.

The course is not designed for patients seeking treatment guidance – but it can help you understand how cancer develops and provides a framework for understanding cancer diagnosis and treatment.

## **Understanding Cancer Metastasis**

#### 2 week:

In this course Resource persons explain how cancer spreads or metastasizes. We'll describe the major theories of metastasis and then describe the biology behind the steps in metastasis. The course also describes the major organs targeted by metastasis and describes how metastases harm the patient.

### **Understanding Prostate Cancer**

Over 1,000,000 men worldwide are diagnosed with prostate cancer every year. Three hundred thousand men worldwide are dying from prostate cancer every year. As people live longer, the incidence of prostate cancer is rising worldwide and prostate cancer continues to be a major health problem. Thanks to years of dedication and commitment to research we've made enormous advances in the treatment of prostate cancer, But there is still a lot of work to be done. In this Understanding Prostate Cancer course, we will provide an introduction to the biology of prostate cancer as well as how it is identified and treated at various stages of the disease.

By the time you finish this course you'll be able to

Define risk factors for prostate cancer

Understand current prostate cancer screening guidelines

Understand prostate cancer staging

Understand treatments for localized prostate cancer

Understand treatments for advanced prostate cancer

Understand treatments to alleviate the symptoms caused by prostate cancer

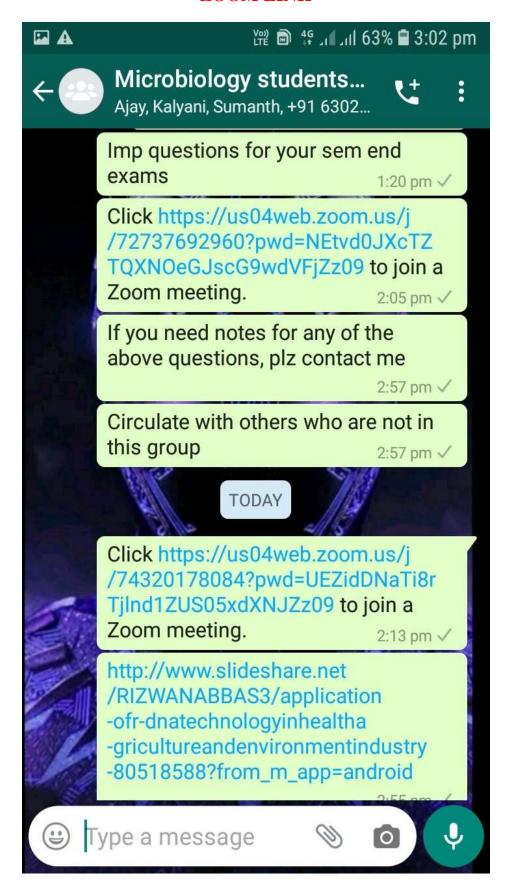

This Understanding Prostate Cancer Course should be helpful to anyone who wants to develop a deeper understanding of prostate cancer biology and treatment. It should be useful to students who are interested in a deeper understanding of the science of cancer. It should also be helpful to health care providers, data managers, and educators who wish to develop a better understanding of prostate cancer and how it affects individuals. The course is not designed for patients seeking treatment guidance. For those of you who might be thinking about a career in cancer research or patient care, I hope this course will inspire you to pursue that path! The course is divided into five modules organized to facilitate learning. I'm glad that you decided to join this course. I hope that you will develop a basic understanding of prostate cancer. I hope that it will help you in whatever field you work. If you are a student, I hope that what you learn here will help you begin a career in cancer biology research and contribute to the worldwide effort to save lives.
