## **BLOOD GROUPING CAMP & REPORT**

**Department of Microbiology**

**Date: 06/02/2021 to 12/02/2021**

The accurate grouping of blood is very important when it comes to having a blood transfusion. If blood is given to a patient that has a blood type that is incompatible with the blood type of the blood that the patient receives, it can cause intravenous clumping in the patient's blood which can be fatal. The patient's body can start producing antibodies that attack the antigens on the blood cells in the blood that was given to the patient, causing reaction and rejection.

In this view The **Department of Microbiology** has organized this camp to make blood available to needy people. We conducted a blood grouping camp@ Rupees 10/- on 6/02/2021 to 12/02/2021 and tested blood groups of 200 members including staff and students and documented. This may be very helpful whenever essential.

### **BLOOD GROUP HISTORY**

Since 1900, we have known about one of the most important blood groups, the ABO blood system, discovered by Physician Karl Landsteiner. He later discovered the Rh blood group system in 1930 and with it the RhD antigen. The blood groups are defined by the presence or absence of a specific antigen on the surface of a red blood cell.

### **BLOOD GROUPS**

Along with red blood cells, white blood cells and platelets, blood also contains antigens, part of the body's immune system. Antigens are proteins or sugars which cover the surface of the red blood cells. Some of these antigens define which blood group you belong to.

There are four ABO blood groups: A, B, AB and O which all refer to the presence of different antigens on the red blood cells. Blood group A means you have the A antigen, while blood group B means you have the B antigen. Blood group AB has both the A and B antigens present on the surface, but blood group O has neither antigen present.

People that have the D antigen on their red blood cells are RhD positive, while those people that don't have the D antigen are Rh D negative. The positive and negative suffix on blood types, such as A+ and B- refers to your Rh D type, also known as your Rhesus D type

Total No. of students & Faculty benefitted: 159
