RAIN
WATER
HARVESTING
PIT

A harvesting pit of 8"× 4" size is dug by our own college students through NSS unit in the month of August, 2021 and the cement rings were inserted which were donated by the village sarpanch Sri. Rakesh Goud Burra.

The rain water flowing through the pipes is collected and channelized to the harvesting pit.

Efforts are on to construct more water pits and conserve water to the most possible extent.

Hand wash is directly done near the plants.

N. Shiva, K. Prashanth and Ch. Rajesh were the students who dug the pit and other students helped in settling the mud and rings.
